

**ARL6 Antibody (N-term) Blocking Peptide**

Synthetic peptide  
Catalog # BP2309a

**Specification**

---

**ARL6 Antibody (N-term) Blocking Peptide - Product Information**

Primary Accession [O9H0F7](#)  
Other Accession [ARL6\\_HUMAN](#)

**ARL6 Antibody (N-term) Blocking Peptide - Additional Information**

Gene ID 84100

**Other Names**

ADP-ribosylation factor-like protein 6, Bardet-Biedl syndrome 3 protein, ARL6, BBS3

**Target/Specificity**

The synthetic peptide sequence used to generate the antibody [AP2309a](#) was selected from the N-term region of human ARL6 . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**ARL6 Antibody (N-term) Blocking Peptide - Protein Information**

Name ARL6

Synonyms BBS3

**Function**

Involved in membrane protein trafficking at the base of the ciliary organelle. Mediates recruitment onto plasma membrane of the BBSome complex which would constitute a coat complex required for sorting of specific membrane proteins to the primary cilia (PubMed:[20603001](http://www.uniprot.org/citations/20603001)). Together with BBS1, is necessary for correct trafficking of PKD1 to primary cilia (By similarity). Together with the BBSome complex and LTZL1, controls SMO ciliary trafficking and contributes to the sonic hedgehog (SHH) pathway regulation (PubMed:[22072986](http://www.uniprot.org/citations/22072986)). May regulate cilia assembly and disassembly and subsequent ciliary signaling events such as the Wnt signaling

cascade (PubMed:<a href="http://www.uniprot.org/citations/20207729" target="\_blank">20207729</a>). Isoform 2 may be required for proper retinal function and organization (By similarity).

#### **Cellular Location**

Cell projection, cilium membrane; Peripheral membrane protein; Cytoplasmic side. Cytoplasm, cytoskeleton, cilium axoneme. Cytoplasm, cytoskeleton, cilium basal body. Note=Appears in a pattern of punctae flanking the microtubule axoneme that likely correspond to small membrane-associated patches. Localizes to the so- called ciliary gate where vesicles carrying ciliary cargo fuse with the membrane

#### **ARL6 Antibody (N-term) Blocking Peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

#### **ARL6 Antibody (N-term) Blocking Peptide - Background**

ARL6 belongs to the ARF family of GTP-binding proteins. ARF proteins are important regulators of cellular traffic and are the founding members of an expanding family of homologous proteins and genomic sequences. They depart from other small GTP-binding proteins by a unique structural device that implements front-back communication from the N-terminus to the nucleotide-binding site. Studies of the mouse ortholog of this protein suggest an involvement in protein transport, membrane trafficking, or cell signaling during hematopoietic maturation. Alternative splicing occurs at this locus and two transcript variants encoding the same protein have been described.
