#### Function

ATP-dependent transporter that catalyzes the transport of a broad-spectrum of porphyrins from the cytoplasm to the extracellular space through the plasma membrane or into the vesicle lumen (PubMed:<a href="http://www.uniprot.org/citations/17661442" target="\_blank">17661442</a>, PubMed:<a href="http://www.uniprot.org/citations/23792964" target="\_blank">23792964</a>, PubMed:<a href="http://www.uniprot.org/citations/27507172" target="\_blank">27507172</a>, PubMed:<a href="http://www.uniprot.org/citations/33007128" target="\_blank">33007128</a>). May also function as an ATP-dependent importer of porphyrins from the cytoplasm into the mitochondria, in turn may participate in the de novo heme biosynthesis regulation and in the coordination of heme and iron homeostasis during phenylhydrazine stress (PubMed:<a href="http://www.uniprot.org/citations/10837493" target="\_blank">10837493</a>, PubMed:<a href="http://www.uniprot.org/citations/17006453" target="\_blank">17006453</a>, PubMed:<a href="http://www.uniprot.org/citations/23792964" target="\_blank">23792964</a>, PubMed:<a href="http://www.uniprot.org/citations/33007128" target="\_blank">33007128</a>). May also play a key role in the early steps of melanogenesis producing PMEL amyloid fibrils (PubMed:<a href="http://www.uniprot.org/citations/29940187" target="\_blank">29940187</a>). In vitro, it confers to cells a resistance to toxic metal such as arsenic and cadmium and against chemotherapeutics agent such as 5-fluorouracil, SN-38 and vincristin (PubMed:<a href="http://www.uniprot.org/citations/21266531" target="\_blank">21266531</a>, PubMed:<a href="http://www.uniprot.org/citations/25202056" target="\_blank">25202056</a>, PubMed:<a href="http://www.uniprot.org/citations/31053883" target="\_blank">31053883</a>). In addition may play a role in the transition metal homeostasis (By similarity).

#### **Anti-ABCB6 Antibody - Background**

ABCB6, ATP-binding cassette sub-family B member 6, mitochondrial is a protein that in humans is encoded by the ABCB6 gene. The membrane-associated protein encoded by this gene is a member of the superfamily of ATP-binding cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intra-cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, White). This protein is a member of the MDR/TAP subfamily. Members of the MDR/TAP subfamily are involved in multidrug resistance as well as antigen presentation. This half-transporter likely plays a role in mitochondrial function. Localized to 2q26, this gene is considered a candidate gene for lethal neonatal metabolic syndrome, a disorder of mitochondrial function.
