

Anti-Bmi1 Antibody
Catalog # ABO11115**Specification**

Anti-Bmi1 Antibody - Product Information

Application	WB
Primary Accession	P35226
Host	Rabbit
Reactivity	Human
Clonality	Polyclonal
Format	Lyophilized

Description

Rabbit IgG polyclonal antibody for Polycomb complex protein BMI-1(BMI1) detection. Tested with WB in Human.

Reconstitution

Add 0.2ml of distilled water will yield a concentration of 500ug/ml.

Anti-Bmi1 Antibody - Additional Information

Gene ID 100532731;648

Other Names

Polycomb complex protein BMI-1, Polycomb group RING finger protein 4, RING finger protein 51, BMI1, PCGF4, RNF51

Calculated MW

36949 MW KDa

Application Details

Western blot, 0.1-0.5 µg/ml, Human

Subcellular Localization

Nucleus. Cytoplasm.

Protein Name

Polycomb complex protein BMI-1

Contents

Each vial contains 5mg BSA, 0.9mg NaCl, 0.2mg Na₂HPO₄, 0.05mg Thimerosal, 0.05mg NaN₃.

Immunogen

A synthetic peptide corresponding to a sequence in the middle region of human Bmi1(136-152aa EFFDQNRLDRKVNKDKE), different from the related mouse sequence by three amino acids.

Purification

Immunogen affinity purified.

Cross Reactivity

No cross reactivity with other proteins

Storage

At -20°C for one year. After r^oConstitution, at 4°C for one month. It^oCan also be aliquotted and stored frozen at -20°C for a longer time.Avoid repeated freezing and thawing.

Sequence Similarities

Contains 1 RING-type zinc finger.

Anti-Bmi1 Antibody - Protein Information

Name BMI1

Synonyms PCGF4, RNF51

Function

Component of a Polycomb group (PcG) multiprotein PRC1-like complex, a complex class required to maintain the transcriptionally repressive state of many genes, including Hox genes, throughout development. PcG PRC1 complex acts via chromatin remodeling and modification of histones; it mediates monoubiquitination of histone H2A 'Lys-119', rendering chromatin heritably changed in its expressibility (PubMed:15386022, PubMed:16359901, PubMed:16714294, PubMed:21772249, PubMed:25355358, PubMed:26151332, PubMed:27827373). The complex composed of RNF2, UB2D3 and BMI1 binds nucleosomes, and has activity only with nucleosomal histone H2A (PubMed:21772249, PubMed:25355358). In the PRC1-like complex, regulates the E3 ubiquitin-protein ligase activity of RNF2/RING2 (PubMed:15386022, PubMed:21772249, PubMed:26151332).

Cellular Location

Nucleus. Cytoplasm

Anti-Bmi1 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Observed bind size: 37KD

Anti-Bmi1 Antibody - Background

BMI1 (BMI1 polycomb ring finger oncogene), also known as RNF51, is a protein which in humans is encoded by the *BMI1* gene. The *Bmi1* gene is highly conserved in evolution as indicated by zoo blot hybridization with *Bmi1* probes corresponding to the protein-encoding domain. By fluorescence in situ hybridization, the human *BMI1* gene is assigned to chromosome 10p13. *BMI1* has a key role in regulating the proliferative activity of normal stem and progenitor cells. Most importantly, they provided evidence that the proliferative potential of leukemic stem and progenitor cells lacking *BMI1* is compromised because they eventually undergo proliferation arrest and show signs of differentiation and apoptosis, leading to transplant failure of the leukemia. Complementation studies showed that *BMI1* completely rescues these proliferative defects. Deletion analysis showed that the RING finger and helix-turn-helix domains of *BMI1* were required for life span extension and repression of the tumor suppressor p16 (INK4). *BMI1* selectively extended the life span of these cultures. Confocal microscopy showed that *BMI1* transiently colocalized with centromeres during interphase in HeLa cells.
