## Anti-VDR Antibody

Catalog \# ABO11291

## Specification

## Anti-VDR Antibody - Product Information

```
Application
Primary Accession
```

## WB

```
Host
Reactivity
P11473
```

## Rabbit

```
Clonality
Human, Mouse, Rat
Format
```

Polyclonal
Lyophilized

```
Description
Rabbit IgG polyclonal antibody for Vitamin D3 receptor(VDR) detection. Tested with WB in Human;Mouse;Rat.
```

## Reconstitution

Add 0.2 ml of distilled water will yield a concentration of $500 \mathrm{ug} / \mathrm{ml}$.

## Anti-VDR Antibody - Additional Information

Gene ID 7421
Other Names
Vitamin D3 receptor, VDR, 1, 25-dihydroxyvitamin D3 receptor, Nuclear receptor subfamily 1 group I member 1, VDR, NR1II

Calculated MW
48289 MW KDa
Application Details
Western blot, 0.1-0.5 $\mu \mathrm{g} / \mathrm{ml}$, Human, Mouse, Rat<br>
Subcellular Localization
Nucleus.

Protein Name
Vitamin D3 receptor

## Contents

Each vial contains 5 mg BSA, $0.9 \mathrm{mg} \mathrm{NaCl}, 0.2 \mathrm{mg} \mathrm{Na} 2 \mathrm{HPO} 4,0.05 \mathrm{mg}$ Thimerosal, 0.05 mg NaN3.

## Immunogen

A synthetic peptide corresponding to a sequence at the C-terminus of human VDR (389-404aa DLRSLNEEHSKQYRCL), different from the related rat and mouse sequences by one amino acid.

## Purification

Immunogen affinity purified.
Cross Reactivity

No cross reactivity with other proteins
Storage
At $-20^{\circ} \mathrm{C}$ for one year. After $r^{\circ}$ Constitution, at $4^{\circ} \mathrm{C}$ for one month. It ${ }^{\circ} \mathrm{Can}$ also be aliquotted and stored frozen at $-20^{\circ} \mathrm{C}$ for a longer time.Avoid repeated freezing and thawing.
Sequence Similarities
Belongs to the nuclear hormone receptor family. NR1 subfamily.

## Anti-VDR Antibody - Protein Information

Name VDR (HGNC:12679)
Synonyms NR1II

## Function

Nuclear receptor for calcitriol, the active form of vitamin D3 which mediates the action of this vitamin on cells (PubMed:<a href="http://www.uniprot.org/citations/10678179"
target="_blank">10678179</a>, PubMed:<a href="http://www.uniprot.org/citations/15728261"
target="_blank">15728261</a>, PubMed:<a href="http://www.uniprot.org/citations/16913708"
target="_blank">16913708</a>, PubMed:<a href="http://www.uniprot.org/citations/28698609"
target="_blank">28698609</a>). Enters the nucleus upon vitamin D3 binding where it forms heterodimers with the retinoid $X$ receptor/RXR (PubMed:<a
href="http://www.uniprot.org/citations/28698609" target="_blank">28698609</a>). The VDR-RXR heterodimers bind to specific response elements on DNA and activate the transcription of vitamin D3-responsive target genes (PubMed:<a
href="http://www.uniprot.org/citations/28698609" target="_blank">28698609</a>). Plays a
central role in calcium homeostasis (By similarity). Also functions as a receptor for the secondary bile acid lithocholic acid (LCA) and its metabolites (PubMed:<a href="http://www.uniprot.org/citations/12016314" target="_blank">12016314</a>, PubMed:<a href="http://www.uniprot.org/citations/32354638" target="_blank">32354638</a>).

## Cellular Location

Nucleus \{ECO:0000255|PROSITE-ProRule:PRU00407, ECO:0000269|PubMed:12145331, ECO:0000269|PubMed:16207705, ECO:0000269|PubMed:28698609\}. Cytoplasm Note=Localizes mainly to the nucleus (PubMed:12145331, PubMed:28698609). Translocated into the nucleus via both ligand- dependent and ligand-independent pathways; ligand-independent nuclear translocation is mediated by IPO4 (PubMed:16207705)

## Anti-VDR Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

## Anti-VDR Antibody - Background

VDR(Vitamin D Receptor), also known as Vitamin D Hormone Receptor, is a member of the nuclear receptor family of transcription factors. Labuda et al.(1991) assigned the VDR gene to 12q12-q14 by in situ hybridization. Using mutation analysis, Jurutka et al.(2000) characterized arg18/arg22, VDR residues immediately N-terminal of the first DNA-binding zinc finger, as vital for contact with the general transcription factor IIB(TFIIB). A natural polymorphic variant of VDR, termed F/M4(missing a Fokl restriction site), which lacks only the first 3 amino acids(including glu2), interacted more efficiently with TFIIB and also possessed elevated transcriptional activity compared with the full-length(f/M1) receptor. Shah et al.(2006) stated that the signaling and oncogenic activity of beta-catenin(CTNNB1) can be repressed by activation of VDR. Conversely, high levels of beta-catenin can potentiate the transcriptional activity of 1,25-dihydroxyvitamin D3.
