## Anti-GJC2 Picoband Antibody - Protein Information

**Name** GJC2

**Synonyms** GJA12

### Function

One gap junction consists of a cluster of closely packed pairs of transmembrane channels, the connexons, through which materials of low MW diffuse from one cell to a neighboring cell. May play a role in myelination in central and peripheral nervous systems.

### Cellular Location

Cell membrane; Multi-pass membrane protein. Cell junction, gap junction

### Tissue Location

Expressed in central nervous system, in sciatic nerve and sural nerve. Also detected in skeletal muscles

#### **Anti-GJC2 Picoband Antibody - Background**

Gap junction gamma-2 (GJC2), also known as connexin-46.6 (Cx46.6) and connexin-47 (Cx47) and gap junction alpha-12 (GJA12), is a protein that in humans is encoded by the GJC2 gene. It is mapped to 1q42.13. This gene encodes a gap junction protein. Gap junction proteins are members of a large family of homologous connexins and comprise 4 transmembrane, 2 extracellular, and 3 cytoplasmic domains. This gene plays a key role in central myelination and is involved in peripheral myelination in humans.
