

# Anti-Phospho-BTK (Y223) Rabbit Monoclonal Antibody

Catalog # ABO13111

### Specification

# Anti-Phospho-BTK (Y223) Rabbit Monoclonal Antibody - Product Information

Application	WB, IP
Primary Accession	<u>Q06187</u>
Host	Rabbit
lsotype	Rabbit IgG
Reactivity	Human
Clonality	Monoclonal
Format	Liquid
Description	
Anti-Phospho-BTK (Y223) Rabbit Monoclonal Antibody . Tested in WB, IP applications. This antibody	
reacts with Human.	

# Anti-Phospho-BTK (Y223) Rabbit Monoclonal Antibody - Additional Information

Gene ID 695

**Other Names** 

Tyrosine-protein kinase BTK, 2.7.10.2, Agammaglobulinemia tyrosine kinase, ATK, B-cell progenitor kinase, BPK, Bruton tyrosine kinase, BTK, AGMX1, ATK, BPK

Calculated MW 76281 MW KDa

Application Details WB 1:1000-1:2000<br>IP 1:20

#### **Subcellular Localization**

Cytoplasm. Cell membrane; Peripheral membrane protein. Nucleus. In steady state, BTK is predominantly cytosolic. Following B-cell receptor (BCR) engagement by antigen, translocates to the plasma membrane through its PH domain. Plasma membrane localization is a critical step in the activation of BTK. A fraction of BTK also shuttles between the nucleus and the cytoplasm, and nuclear export is mediated by the nuclear export receptor CRM1.

**Tissue Specificity** Predominantly expressed in B-lymphocytes.

**Contents** Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol, 0.4-0.5mg/ml BSA.

Immunogen A synthesized peptide derived from human Phospho-BTK (Y223)

Purification Affinity-chromatography

Storage

Store at -20°C for one year. For short term storage and frequent use, store at 4°C for up to one month. Avoid repeated freeze-thaw cycles.

## Anti-Phospho-BTK (Y223) Rabbit Monoclonal Antibody - Protein Information

Name BTK

Synonyms AGMX1, ATK, BPK

#### Function

Non-receptor tyrosine kinase indispensable for B lymphocyte development, differentiation and signaling (PubMed:<a href="http://www.uniprot.org/citations/19290921"

target="\_blank">19290921</a>). Binding of antigen to the B-cell antigen receptor (BCR) triggers signaling that ultimately leads to B-cell activation (PubMed:<a

href="http://www.uniprot.org/citations/19290921" target="\_blank">19290921</a>). After BCR engagement and activation at the plasma membrane, phosphorylates PLCG2 at several sites, igniting the downstream signaling pathway through calcium mobilization, followed by activation of the protein kinase C (PKC) family members (PubMed:<a

href="http://www.uniprot.org/citations/11606584" target="\_blank">11606584</a>). PLCG2 phosphorylation is performed in close cooperation with the adapter protein B-cell linker protein BLNK (PubMed:<a href="http://www.uniprot.org/citations/11606584"

target="\_blank">11606584</a>). BTK acts as a platform to bring together a diverse array of signaling proteins and is implicated in cytokine receptor signaling pathways (PubMed:<a href="http://www.uniprot.org/citations/16517732" target="\_blank">16517732</a>, PubMed:<a href="http://www.uniprot.org/citations/17932028" target="\_blank">16517732</a>, PubMed:<a href="http://www.uniprot.org/citations/17932028" target="\_blank">17932028</a>). Plays an important role in the function of immune cells of innate as well as adaptive immunity, as a component of the Toll-like receptors (TLR) pathway (PubMed:<a

href="http://www.uniprot.org/citations/16517732" target="\_blank">16517732</a>). The TLR pathway acts as a primary surveillance system for the detection of pathogens and are crucial to the activation of host defense (PubMed:<a href="http://www.uniprot.org/citations/16517732" target="\_blank">16517732</a>). Especially, is a critical molecule in regulating TLR9 activation in splenic B-cells (PubMed:<a href="http://www.uniprot.org/citations/16517732" target="\_blank">16517732" target="\_blank">16517732</a>).

target="\_blank">16517732</a>, PubMed:<a href="http://www.uniprot.org/citations/17932028" target="\_blank">17932028</a>). Within the TLR pathway, induces tyrosine phosphorylation of TIRAP which leads to TIRAP degradation (PubMed:<a

href="http://www.uniprot.org/citations/16415872" target="\_blank">16415872</a>). BTK also plays a critical role in transcription regulation (PubMed:<a

href="http://www.uniprot.org/citations/19290921" target="\_blank">19290921</a>). Induces the activity of NF- kappa-B, which is involved in regulating the expression of hundreds of genes (PubMed:<a href="http://www.uniprot.org/citations/19290921" target="\_blank">19290921</a>). BTK is involved on the signaling pathway linking TLR8 and TLR9 to NF-kappa-B (PubMed:<a href="http://www.uniprot.org/citations/19290921" target="\_blank">19290921</a>). Acts as an activator of NLRP3 inflammasome assembly by mediating phosphorylation of NLRP3 (PubMed:<a href="http://www.uniprot.org/citations/34554188" target="\_blank">34554188</a>). Transiently phosphorylates transcription factor GTF2I on tyrosine residues in response to BCR (PubMed:<a href="http://www.uniprot.org/citations/9012831" target="\_blank">9012831</a>). GTF2I then translocates to the nucleus to bind regulatory enhancer elements to modulate gene expression (PubMed:<a href="http://www.uniprot.org/citations/9012831" target="\_blank">9012831</a>). ARID3A and NFAT are other transcriptional target of BTK (PubMed:<a

href="http://www.uniprot.org/citations/16738337" target="\_blank">16738337</a>). BTK is required for the formation of functional ARID3A DNA-binding complexes (PubMed:<a href="http://www.uniprot.org/citations/16738337" target="\_blank">16738337</a>). BTK is however no evidence that BTK itself binds directly to DNA (PubMed:<a href="http://www.uniprot.org/citations/16738337" target="\_blank">16738337</a>). There is however no evidence that BTK itself binds directly to DNA (PubMed:<a href="http://www.uniprot.org/citations/16738337" target="\_blank">16738337</a>). There is however no evidence that BTK itself binds directly to DNA (PubMed:<a href="http://www.uniprot.org/citations/16738337" target="\_blank">16738337</a>). There is however no evidence that BTK itself binds directly to DNA (PubMed:<a href="http://www.uniprot.org/citations/16738337" target="\_blank">http://www.uniprot.org/citations/16738337" target="\_blank">16738337</a>). There is however no evidence that BTK itself binds directly to DNA (PubMed:<a href="http://www.uniprot.org/citations/16738337" target="\_blank">http://www.uniprot.org/citations/16738337" target="\_blank"</a>

href="http://www.uniprot.org/citations/16738337" target="\_blank">16738337</a>). BTK has a

dual role in the regulation of apoptosis (PubMed: <a

href="http://www.uniprot.org/citations/9751072" target="\_blank">9751072</a>). Plays a role in STING1- mediated induction of type I interferon (IFN) response by phosphorylating DDX41 (PubMed:<a href="http://www.uniprot.org/citations/25704810" target="\_blank">25704810</a>).

#### **Cellular Location**

Cytoplasm. Cell membrane; Peripheral membrane protein. Nucleus Membrane raft {ECO:000250|UniProtKB:P35991}. Note=In steady state, BTK is predominantly cytosolic. Following B-cell receptor (BCR) engagement by antigen, translocates to the plasma membrane through its PH domain Plasma membrane localization is a critical step in the activation of BTK. A fraction of BTK also shuttles between the nucleus and the cytoplasm, and nuclear export is mediated by the nuclear export receptor CRM1.

**Tissue Location** 

Predominantly expressed in B-lymphocytes.

## Anti-Phospho-BTK (Y223) Rabbit Monoclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

### Anti-Phospho-BTK (Y223) Rabbit Monoclonal Antibody - Images

Western blot analysis of Phospho-BTK (Y223) expression in Raji cell lysate treated with pervanadate.
