## Information

Name GYS1 ([HGNC:4706](#))

Synonyms GYS

### Function

Glycogen synthase participates in the glycogen biosynthetic process along with glycogenin and glycogen branching enzyme. Extends the primer composed of a few glucose units formed by glycogenin by adding new glucose units to it. In this context, glycogen synthase transfers the glycosyl residue from UDP-Glc to the non-reducing end of alpha-1,4-glucan.

### Tissue Location

Expressed in skeletal muscle and most other cell types where glycogen is present.
