

**Anti-RAGE Rabbit Monoclonal Antibody**  
Catalog # ABO13500

**Specification**

---

**Anti-RAGE Rabbit Monoclonal Antibody - Product Information**

Application	WB
Primary Accession	<a href="#">Q15109</a>
Host	Rabbit
Isotype	Rabbit IgG
Reactivity	Rat, Human, Mouse
Clonality	Monoclonal
Format	Liquid

**Description**

Anti-RAGE Rabbit Monoclonal Antibody . Tested in WB application. This antibody reacts with Human, Mouse, Rat.

**Anti-RAGE Rabbit Monoclonal Antibody - Additional Information**

**Gene ID** 177

**Other Names**

Advanced glycosylation end product-specific receptor, Receptor for advanced glycosylation end products, AGER, RAGE

**Calculated MW**

42803 MW KDa

**Application Details**

WB 1:500-1:2000

**Subcellular Localization**

Isoform 1: Cell membrane; Single-pass type I membrane protein.

**Tissue Specificity**

Endothelial cells.

**Contents**

Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol, 0.4-0.5mg/ml BSA.

**Immunogen**

A synthesized peptide derived from human RAGE

**Purification**

Affinity-chromatography

Storage

**Store at -20°C for one year. For short term storage and frequent use, store at 4°C for up to one month. Avoid repeated**

## freeze-thaw cycles.

### Anti-RAGE Rabbit Monoclonal Antibody - Protein Information

**Name** AGER

**Synonyms** RAGE

#### Function

Cell surface pattern recognition receptor that senses endogenous stress signals with a broad ligand repertoire including advanced glycation end products, S100 proteins, high-mobility group box 1 protein/HMGB1, amyloid beta/APP oligomers, nucleic acids, phospholipids and glycosaminoglycans (PubMed: <a href="http://www.uniprot.org/citations/27572515" target="\_blank">27572515</a>, PubMed: <a href="http://www.uniprot.org/citations/28515150" target="\_blank">28515150</a>, PubMed: <a href="http://www.uniprot.org/citations/34743181" target="\_blank">34743181</a>). Advanced glycosylation end products are nonenzymatically glycosylated proteins which accumulate in vascular tissue in aging and at an accelerated rate in diabetes (PubMed: <a href="http://www.uniprot.org/citations/21565706" target="\_blank">21565706</a>). These ligands accumulate at inflammatory sites during the pathogenesis of various diseases, including diabetes, vascular complications, neurodegenerative disorders, and cancers and RAGE transduces their binding into pro-inflammatory responses. Upon ligand binding, uses TIRAP and MYD88 as adapters to transduce the signal ultimately leading to the induction of inflammatory cytokines IL6, IL8 and TNFalpha through activation of NF-kappa-B (PubMed: <a href="http://www.uniprot.org/citations/21829704" target="\_blank">21829704</a>, PubMed: <a href="http://www.uniprot.org/citations/33436632" target="\_blank">33436632</a>). Interaction with S100A12 on endothelium, mononuclear phagocytes, and lymphocytes triggers cellular activation, with generation of key pro-inflammatory mediators (PubMed: <a href="http://www.uniprot.org/citations/19386136" target="\_blank">19386136</a>). Interaction with S100B after myocardial infarction may play a role in myocyte apoptosis by activating ERK1/2 and p53/TP53 signaling (By similarity). Contributes to the translocation of amyloid- beta peptide (ABPP) across the cell membrane from the extracellular to the intracellular space in cortical neurons (PubMed: <a href="http://www.uniprot.org/citations/19906677" target="\_blank">19906677</a>). ABPP- initiated RAGE signaling, especially stimulation of p38 mitogen- activated protein kinase (MAPK), has the capacity to drive a transport system delivering ABPP as a complex with RAGE to the intraneuronal space. Participates in endothelial albumin transcytosis together with HMGB1 through the RAGE/SRC/Caveolin-1 pathway, leading to endothelial hyperpermeability (PubMed: <a href="http://www.uniprot.org/citations/27572515" target="\_blank">27572515</a>). Mediates the loading of HMGB1 in extracellular vesicles (EVs) that shuttle HMGB1 to hepatocytes by transferrin-mediated endocytosis and subsequently promote hepatocyte pyroptosis by activating the NLRP3 inflammasome (PubMed: <a href="http://www.uniprot.org/citations/34743181" target="\_blank">34743181</a>). Promotes also extracellular hypomethylated DNA (CpG DNA) uptake by cells via the endosomal route to activate inflammatory responses (PubMed: <a href="http://www.uniprot.org/citations/24081950" target="\_blank">24081950</a>, PubMed: <a href="http://www.uniprot.org/citations/28515150" target="\_blank">28515150</a>).

#### Cellular Location

[Isoform 1]: Cell membrane; Single-pass type I membrane protein [Isoform 10]: Cell membrane; Single-pass type I membrane protein

#### Tissue Location

Endothelial cells.

### Anti-RAGE Rabbit Monoclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.
