

**Anti-Lin28 LIN28A Rabbit Monoclonal Antibody**  
Catalog # ABO13759

**Specification**

---

**Anti-Lin28 LIN28A Rabbit Monoclonal Antibody - Product Information**

Application	WB, IP, FC
Primary Accession	<a href="#">Q9H9Z2</a>
Host	Rabbit
Isotype	Rabbit IgG
Reactivity	Human
Clonality	Monoclonal
Format	Liquid

**Description**

Anti-Lin28 LIN28A Rabbit Monoclonal Antibody . Tested in WB, IP, Flow Cytometry applications.  
This antibody reacts with Human.

**Anti-Lin28 LIN28A Rabbit Monoclonal Antibody - Additional Information**

**Gene ID** 79727

**Other Names**

Protein lin-28 homolog A, Lin-28A, Zinc finger CCHC domain-containing protein 1, LIN28A, CSDD1, LIN28, ZCCHC1

**Calculated MW**

22743 MW KDa

**Application Details**

WB 1:500-1:2000<br>IP 1:50<br>FC 1:50

**Subcellular Localization**

Cytoplasm. Nucleus, nucleolus. Predominantly cytoplasmic (PubMed:22118463). Nucleolar localization observed in 10-15% of the nuclei in differentiated myotubes (By similarity). Shuttles between the cytoplasm and the nucleus. Localizes to cytoplasmic processing bodies and stress granules..

**Tissue Specificity**

Expressed in embryonic stem cells, placenta and testis. Tends to be up-regulated in HER2-overexpressing breast tumors..

**Contents**

Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol, 0.4-0.5mg/ml BSA.

**Immunogen**

A synthesized peptide derived from human Lin28

**Purification**

Affinity-chromatography

**Storage**

**Store at -20°C for one year. For short term storage and frequent use, store at 4°C for up to one month. Avoid repeated freeze-thaw cycles.**

**Anti-Lin28 LIN28A Rabbit Monoclonal Antibody - Protein Information****Name** LIN28A**Synonyms** CSDD1, LIN28, ZCCHC1**Function**

RNA-binding protein that inhibits processing of pre-let-7 miRNAs and regulates translation of mRNAs that control developmental timing, pluripotency and metabolism (PubMed:<a href="http://www.uniprot.org/citations/21247876" target="\_blank">21247876</a>). Seems to recognize a common structural G-quartet (G4) feature in its miRNA and mRNA targets (Probable). 'Translational enhancer' that drives specific mRNAs to polysomes and increases the efficiency of protein synthesis. Its association with the translational machinery and target mRNAs results in an increased number of initiation events per molecule of mRNA and, indirectly, in mRNA stabilization. Binds IGF2 mRNA, MYOD1 mRNA, ARBP/36B4 ribosomal protein mRNA and its own mRNA. Essential for skeletal muscle differentiation program through the translational up-regulation of IGF2 expression. Suppressor of microRNA (miRNA) biogenesis, including that of let-7, miR107, miR-143 and miR-200c. Specifically binds the miRNA precursors (pre-miRNAs), recognizing an 5'-GGAG-3' motif found in pre-miRNA terminal loop, and recruits TUT4 and TUT7 uridylyltransferases (PubMed:<a href="http://www.uniprot.org/citations/18951094" target="\_blank">18951094</a>, PubMed:<a href="http://www.uniprot.org/citations/19703396" target="\_blank">19703396</a>, PubMed:<a href="http://www.uniprot.org/citations/22118463" target="\_blank">22118463</a>, PubMed:<a href="http://www.uniprot.org/citations/22898984" target="\_blank">22898984</a>). This results in the terminal uridylation of target pre-miRNAs (PubMed:<a href="http://www.uniprot.org/citations/18951094" target="\_blank">18951094</a>, PubMed:<a href="http://www.uniprot.org/citations/19703396" target="\_blank">19703396</a>, PubMed:<a href="http://www.uniprot.org/citations/22118463" target="\_blank">22118463</a>, PubMed:<a href="http://www.uniprot.org/citations/22898984" target="\_blank">22898984</a>). Uridylated pre-miRNAs fail to be processed by Dicer and undergo degradation. The repression of let-7 expression is required for normal development and contributes to maintain the pluripotent state by preventing let-7-mediated differentiation of embryonic stem cells (PubMed:<a href="http://www.uniprot.org/citations/18951094" target="\_blank">18951094</a>, PubMed:<a href="http://www.uniprot.org/citations/19703396" target="\_blank">19703396</a>, PubMed:<a href="http://www.uniprot.org/citations/22118463" target="\_blank">22118463</a>, PubMed:<a href="http://www.uniprot.org/citations/22898984" target="\_blank">22898984</a>). Localized to the periendoplasmic reticulum area, binds to a large number of spliced mRNAs and inhibits the translation of mRNAs destined for the ER, reducing the synthesis of transmembrane proteins, ER or Golgi lumen proteins, and secretory proteins. Binds to and enhances the translation of mRNAs for several metabolic enzymes, such as PFKF, PDHA1 or SDHA, increasing glycolysis and oxidative phosphorylation. Which, with the let-7 repression may enhance tissue repair in adult tissue (By similarity).

**Cellular Location**

Cytoplasm. Rough endoplasmic reticulum {ECO:0000250|UniProtKB:Q8K3Y3}. Cytoplasm, P-body. Cytoplasm, Stress granule. Nucleus, nucleolus {ECO:0000250|UniProtKB:Q8K3Y3}. Note=Predominantly cytoplasmic (PubMed:22118463). In the cytoplasm, localizes to peri-endoplasmic reticulum regions and detected in the microsomal fraction derived from rough endoplasmic reticulum (RER) following subcellular fractionation May be bound to the cytosolic surface of RER on which ER-associated mRNAs are translated (By similarity). Shuttle from the nucleus to the cytoplasm requires RNA-binding (PubMed:17617744). Nucleolar localization is observed in 10-15% of the nuclei in differentiated myotubes (By similarity).

{ECO:0000250|UniProtKB:Q8K3Y3, ECO:0000269|PubMed:17617744,  
ECO:0000269|PubMed:22118463}

### Tissue Location

Expressed in embryonic stem cells, placenta and testis. Tends to be up-regulated in HER2-overexpressing breast tumors

### Anti-Lin28 LIN28A Rabbit Monoclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### Anti-Lin28 LIN28A Rabbit Monoclonal Antibody - Images

Figure 1. Western blot analysis of Lin28 using anti-Lin28 antibody (M01966).

Electrophoresis was performed on a 5-20% SDS-PAGE gel at 70V (Stacking gel) / 90V (Resolving gel) for 2-3 hours. The sample well of each lane was loaded with 30 ug of sample under reducing conditions.

Lane 1: human Caco-2 whole cell lysates,

Lane 2: human K562 whole cell lysates.

After electrophoresis, proteins were transferred to a nitrocellulose membrane at 150 mA for 50-90 minutes. Blocked the membrane with 5% non-fat milk/TBS for 1.5 hour at RT. The membrane was incubated with rabbit anti-Lin28 antigen affinity purified monoclonal antibody (Catalog # M01966) at 1:500 overnight at 4°C, then washed with TBS-0.1%Tween 3 times with 5 minutes each and probed with a goat anti-rabbit IgG-HRP secondary antibody at a dilution of 1:5000 for 1.5 hour at RT. The signal is developed using an Enhanced Chemiluminescent detection (ECL) kit (Catalog # EK1002) with Tanon 5200 system. A specific band was detected for Lin28 at approximately 26 kDa. The expected band size for Lin28 is at 24 kDa.
