

**Anti-Human Cytochrome C DyLight® 488 conjugated CYCS Antibody(monoclonal, 15F10)
Catalog # ABO14791**

Specification

**Anti-Human Cytochrome C DyLight® 488 conjugated CYCS Antibody(monoclonal, 15F10)
- Product Information**

Application	FC
Primary Accession	P99999
Host	Mouse
Isotype	Mouse IgG1
Reactivity	Human
Clonality	Monoclonal
Format	Liquid

Description

Anti-Human Cytochrome C DyLight® 488 conjugated CYCS Antibody (monoclonal, 15F10) . Tested in Flow Cytometry applications. This antibody reacts with Human.

**Anti-Human Cytochrome C DyLight® 488 conjugated CYCS Antibody(monoclonal, 15F10)
- Additional Information**

Gene ID 54205

Other Names

Cytochrome c, CYCS, CYC

Application Details

Flow Cytometry, 1-3 µg/1x10⁶ cells

Subcellular Localization

Mitochondrion intermembrane space. Loosely associated with the inner membrane.

Contents

Each vial contains 50% glycerol, 0.9% NaCl, 0.2% Na₂HPO₄, 0.02% Na₃N.

Immunogen

E.coli-derived human Cytochrome C recombinant protein (Position: G2-E105). Human Cytochrome C shares 91% amino acid (aa) sequence identity with both mouse and rat Cytochrome C.

Cross Reactivity

No cross-reactivity with other proteins.

Storage

**At -20°C for one year from date of receipt.
Avoid repeated freezing and thawing.
Protect from light.**

**Anti-Human Cytochrome C DyLight® 488 conjugated CYCS Antibody(monoclonal, 15F10)
- Protein Information**

Name CYCS

Synonyms CYC

Function

Electron carrier protein. The oxidized form of the cytochrome c heme group can accept an electron from the heme group of the cytochrome c1 subunit of cytochrome reductase. Cytochrome c then transfers this electron to the cytochrome oxidase complex, the final protein carrier in the mitochondrial electron-transport chain.

Cellular Location

Mitochondrion intermembrane space. Note=Loosely associated with the inner membrane

Anti-Human Cytochrome C DyLight® 488 conjugated CYCS Antibody(monoclonal, 15F10) - Protocols

Provided below are standard protocols that you may find useful for product applications.

Anti-Human Cytochrome C DyLight® 488 conjugated CYCS Antibody(monoclonal, 15F10) - Background

CYCS is also known as CYC, HCS or THC4. This gene encodes a small heme protein that functions as a central component of the electron transport chain in mitochondria. The encoded protein associates with the inner membrane of the mitochondrion where it accepts electrons from cytochrome b and transfers them to the cytochrome oxidase complex. This protein is also involved in initiation of apoptosis. Mutations in this gene are associated with autosomal dominant nonsyndromic thrombocytopenia. Numerous processed pseudogenes of this gene are found throughout the human genome.
