

# **Anti-Cystathionase Rabbit Monoclonal Antibody**

Catalog # ABO15717

# **Specification**

### **Anti-Cystathionase Rabbit Monoclonal Antibody - Product Information**

Application WB, IP
Primary Accession P32929
Host Rabbit
Isotype IgG
Reactivity Human
Clonality Monoclonal
Format Liquid

**Description** 

Anti-Cystathionase Rabbit Monoclonal Antibody . Tested in WB, IP applications. This antibody reacts with Human.

## **Anti-Cystathionase Rabbit Monoclonal Antibody - Additional Information**

#### **Gene ID 1491**

#### **Other Names**

Cystathionine gamma-lyase, CGL, CSE, 4.4.1.1, Cysteine desulfhydrase, Cysteine-protein sulfhydrase, Gamma-cystathionase, Homocysteine desulfhydrase, 4.4.1.2, CTH

### Calculated MW 42 kDa KDa

# **Application Details**

WB 1:1000-1:5000<br>IP 1:50

#### **Contents**

Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol, 0.4-0.5mg/ml BSA.

#### **Immunogen**

A synthesized peptide derived from human Cystathionase

## **Purification**

Affinity-chromatography

Storage Store at -20°C for one year. For short term

storage and frequent use, store at 4°C for

up to one month. Avoid repeated

freeze-thaw cycles.

### Anti-Cystathionase Rabbit Monoclonal Antibody - Protein Information

# **Name CTH**

#### **Function**

Catalyzes the last step in the trans-sulfuration pathway from L-methionine to L-cysteine in a pyridoxal-5'-phosphate (PLP)-dependent manner, which consists on cleaving the L,L-cystathionine molecule into L-cysteine, ammonia and 2-oxobutanoate (PubMed: <a href="http://www.uniprot.org/citations/10212249" target=" blank">10212249</a>, PubMed:<a href="http://www.uniprot.org/citations/18476726" target=" blank">18476726</a>, PubMed:<a href="http://www.uniprot.org/citations/19261609" target=" blank">19261609</a>, PubMed:<a href="http://www.uniprot.org/citations/19961860" target="blank">19961860</a>). Part of the Lcysteine derived from the trans-sulfuration pathway is utilized for biosynthesis of the ubiquitous antioxidant glutathione (PubMed: <a href="http://www.uniprot.org/citations/18476726" target=" blank">18476726</a>). Besides its role in the conversion of L- cystathionine into L-cysteine, it utilizes L-cysteine and L- homocysteine as substrates (at much lower rates than L,L-cystathionine) to produce the endogenous gaseous signaling molecule hydrogen sulfide (H2S) (PubMed:<a href="http://www.uniprot.org/citations/10212249" target=" blank">10212249</a>, PubMed:<a href="http://www.uniprot.org/citations/19019829" target="\_blank">19019829</a>, PubMed:<a href="http://www.uniprot.org/citations/19261609" target="\_blank">19261609</a>, PubMed:<a href="http://www.uniprot.org/citations/19961860" target="blank">19961860</a>). In vitro, it converts two L-cysteine molecules into lanthionine and H2S, also two L-homocysteine molecules to homolanthionine and H2S, which can be particularly relevant under conditions of severe hyperhomocysteinemia (which is a risk factor for cardiovascular disease, diabetes, and Alzheimer's disease) (PubMed:<a href="http://www.uniprot.org/citations/19261609" target=" blank">19261609</a>). Lanthionine and homolanthionine are structural homologs of L,L-cystathionine that differ by the absence or presence of an extra methylene group, respectively (PubMed:<a href="http://www.uniprot.org/citations/19261609" target=" blank">19261609</a>). Acts as a cysteine-protein sulfhydrase by mediating sulfhydration of target proteins: sulfhydration consists of converting -SH groups into -SSH on specific cysteine residues of target proteins such as GAPDH, PTPN1 and NF-kappa-B subunit RELA, thereby regulating their function (PubMed: <a href="http://www.uniprot.org/citations/22169477" target=" blank">22169477</a>). By generating the gasotransmitter H2S, it participates in a number of physiological processes such as vasodilation, bone protection, and inflammation (Probable) (PubMed: <a href="http://www.uniprot.org/citations/29254196" target=" blank">29254196</a>). Plays an essential role in myogenesis by contributing to the biogenesis of H2S in skeletal muscle tissue (By similarity). Can also accept homoserine as substrate (By similarity). Catalyzes the elimination of selenocystathionine (which can be derived from the diet) to yield selenocysteine, ammonia and 2-oxobutanoate (By similarity).

Cellular Location Cytoplasm.

#### **Tissue Location**

Highly expressed in liver (PubMed:10727430, PubMed:20305127). Also in muscle and lower expression in most tissues except heart, pituitary gland, spleen, thymus, and vascular tissue, where it is hardly detected (PubMed:20305127)

## **Anti-Cystathionase Rabbit Monoclonal Antibody - Protocols**

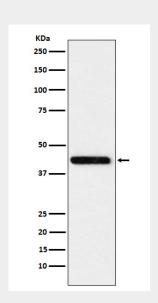

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- <u>Immunofluorescence</u>
- Immunoprecipitation
- Flow Cytomety

# • Cell Culture

# **Anti-Cystathionase Rabbit Monoclonal Antibody - Images**

Western blot analysis of Cystathionase expression in HeLa cell lysate.
