

**Anti-EIF3e Antibody Picoband™ (monoclonal, 10F5H6)**  
Catalog # ABO16248**Specification****Anti-EIF3e Antibody Picoband™ (monoclonal, 10F5H6) - Product Information**

Application	WB, FC
Primary Accession	<a href="#">P60228</a>
Host	Mouse
Isotype	Mouse IgG2b
Reactivity	Rat, Human, Mouse
Clonality	Monoclonal
Format	Lyophilized

**Description**

Anti-EIF3e Antibody Picoband™ (monoclonal, 10F5H6) . Tested in Flow Cytometry, WB applications. This antibody reacts with Human, Mouse, Rat.

**Reconstitution**

Adding 0.2 ml of distilled water will yield a concentration of 500 µg/ml.

**Anti-EIF3e Antibody Picoband™ (monoclonal, 10F5H6) - Additional Information**

**Gene ID** 3646

**Other Names**

Eukaryotic translation initiation factor 3 subunit E {ECO:0000255|HAMAP-Rule:MF\_03004}, eIF3e {ECO:0000255|HAMAP-Rule:MF\_03004}, Eukaryotic translation initiation factor 3 subunit 6 {ECO:0000255|HAMAP-Rule:MF\_03004}, Viral integration site protein INT-6 homolog, eIF-3 p48 {ECO:0000255|HAMAP-Rule:MF\_03004}, EIF3E {ECO:0000255|HAMAP-Rule:MF\_03004}

**Calculated MW**

52 kDa KDa

**Application Details**

Western blot, 0.25-0.5 µg/ml, Human, Mouse, Rat  
Flow Cytometry, 1-3 µg/1x10<sup>6</sup> cells, Human

**Contents**

Each vial contains 4 mg Trehalose, 0.9 mg NaCl and 0.2 mg Na<sub>2</sub>HPO<sub>4</sub>.

**Immunogen**

E.coli-derived human EIF3e recombinant protein (Position: A160-Q241). Human EIF3e shares 100% amino acid (aa) sequence identity with both mouse and rat EIF3e.

**Purification**

Immunogen affinity purified.

**Storage**

**At -20°C for one year from date of receipt.  
After reconstitution, at 4°C for one month.  
It can also be aliquotted and stored frozen**

at -20°C for six months. Avoid repeated freezing and thawing.

## Anti-EIF3e Antibody Picoband™ (monoclonal, 10F5H6) - Protein Information

**Name** EIF3E {ECO:0000255|HAMAP-Rule:MF\_03004}

### Function

Component of the eukaryotic translation initiation factor 3 (eIF-3) complex, which is required for several steps in the initiation of protein synthesis (PubMed:<a href="http://www.uniprot.org/citations/17581632" target="\_blank">17581632</a>, PubMed:<a href="http://www.uniprot.org/citations/25849773" target="\_blank">25849773</a>, PubMed:<a href="http://www.uniprot.org/citations/27462815" target="\_blank">27462815</a>). The eIF-3 complex associates with the 40S ribosome and facilitates the recruitment of eIF-1, eIF-1A, eIF-2:GTP:methionyl- tRNA<sub>i</sub> and eIF-5 to form the 43S pre-initiation complex (43S PIC). The eIF-3 complex stimulates mRNA recruitment to the 43S PIC and scanning of the mRNA for AUG recognition. The eIF-3 complex is also required for disassembly and recycling of post-termination ribosomal complexes and subsequently prevents premature joining of the 40S and 60S ribosomal subunits prior to initiation (PubMed:<a href="http://www.uniprot.org/citations/17581632" target="\_blank">17581632</a>). The eIF-3 complex specifically targets and initiates translation of a subset of mRNAs involved in cell proliferation, including cell cycling, differentiation and apoptosis, and uses different modes of RNA stem-loop binding to exert either translational activation or repression (PubMed:<a href="http://www.uniprot.org/citations/25849773" target="\_blank">25849773</a>). Required for nonsense-mediated mRNA decay (NMD); may act in conjunction with UPF2 to divert mRNAs from translation to the NMD pathway (PubMed:<a href="http://www.uniprot.org/citations/17468741" target="\_blank">17468741</a>). May interact with MCM7 and EPAS1 and regulate the proteasome-mediated degradation of these proteins (PubMed:<a href="http://www.uniprot.org/citations/17310990" target="\_blank">17310990</a>, PubMed:<a href="http://www.uniprot.org/citations/17324924" target="\_blank">17324924</a>).

### Cellular Location

Cytoplasm. Nucleus, PML body.

### Tissue Location

Ubiquitously expressed. Expressed at highest levels in appendix, lymph, pancreas, skeletal muscle, spleen and thymus

## Anti-EIF3e Antibody Picoband™ (monoclonal, 10F5H6) - Protocols

## Anti-EIF3e Antibody Picoband™ (monoclonal, 10F5H6) - Images

Figure 1. Western blot analysis of EIF3E using anti-EIF3E antibody (M00481-1). Electrophoresis was performed on a 5-20% SDS-PAGE gel at 70V (Stacking gel) / 90V (Resolving gel) for 2-3 hours. The sample well of each lane was loaded with 30 ug of sample under reducing conditions.

- Lane 1: human Raji whole cell lysates,
- Lane 2: human K562 whole cell lysates,
- Lane 3: rat thymus tissue lysates,
- Lane 4: mouse thymus tissue lysates,
- Lane 5: mouse ANA-1 whole cell lysates,
- Lane 6: mouse SP2/0 whole cell lysates.

After electrophoresis, proteins were transferred to a nitrocellulose membrane at 150 mA for 50-90 minutes. Blocked the membrane with 5% non-fat milk/TBS for 1.5 hour at RT. The membrane was incubated with mouse anti-EIF3E antigen affinity purified monoclonal antibody (Catalog # M00481-1) at 0.5 µg/mL overnight at 4°C, then washed with TBS-0.1%Tween 3 times with 5 minutes each and probed with a goat anti-mouse IgG-HRP secondary antibody at a dilution of 1:10000 for 1.5 hour at RT. The signal is developed using an Enhanced Chemiluminescent detection (ECL) kit (Catalog # EK1001) with Tanon 5200 system. A specific band was detected for EIF3E at approximately 52 kDa. The expected band size for EIF3E is at 52 kDa.

Figure 2. Flow Cytometry analysis of U2OS cells using anti-EIF3E antibody (M00481-1). Overlay histogram showing U2OS cells stained with M00481-1 (Blue line). The cells were blocked with 10% normal goat serum. And then incubated with mouse anti-EIF3E Antibody (M00481-1, 1 µg/1x10<sup>6</sup> cells) for 30 min at 20°C. DyLight®488 conjugated goat anti-mouse IgG (BA1126, 5-10 µg/1x10<sup>6</sup> cells) was used as secondary antibody for 30 minutes at 20°C. Isotype control antibody (Green line) was mouse IgG (1 µg/1x10<sup>6</sup>) used under the same conditions. Unlabelled sample (Red line) was also used as a control.

### Anti-EIF3e Antibody Picoband™ (monoclonal, 10F5H6) - Background

Eukaryotic translation initiation factor 3 subunit E is a protein that in humans is encoded by the

EIF3E gene. The human homolog of EIF3E is located on chromosome region 8q22-q23. It is composed of 13 exons that span 45 kb of genomic DNA. EIF3E is the component of the eukaryotic translation initiation factor 3 (eIF-3) complex, which is required for several steps in the initiation of protein synthesis its localization/assembly. The eIF-3 complex associates with the 40S ribosome and facilitates the recruitment of eIF-1, eIF-1A, eIF-2:GTP:methionyl-tRNA<sub>i</sub> and eIF-5 to form the 43S pre-initiation complex (43S PIC). And the eIF-3 complex stimulates mRNA recruitment to the 43S PIC and scanning of the mRNA for AUG recognition. The eIF-3 complex is also required for disassembly and recycling of post-termination ribosomal complexes and subsequently prevents premature joining of the 40S and 60S ribosomal subunits prior to initiation.
