

#### Anti-Lamin A+C/LMNA Antibody Picoband<sup>™</sup> (monoclonal, 5F3C12) Catalog # ABO16622

#### Specification

# Anti-Lamin A+C/LMNA Antibody Picoband<sup>™</sup> (monoclonal, 5F3C12) - Product Information

Application	WB, IHC
Primary Accession	P02545
Host	Mouse
Isotype	lgG2b
Reactivity	Rat, Human, Mouse
Clonality	Monoclonal
Format	Lyophilized
Description	
Anti-Lamin A+C/LMNA Antibody Picobar	nd™ (monoclonal, 5E3C12) . Tested in

Anti-Lamin A+C/LMNA Antibody Picoband<sup>™</sup> (monoclonal, 5F3C12) . Tested in IHC, WB applications. This antibody reacts with Human, Mouse, Rat.

# Reconstitution

Adding 0.2 ml of distilled water will yield a concentration of 500  $\mu$ g/ml.

# Anti-Lamin A+C/LMNA Antibody Picoband<sup>™</sup> (monoclonal, 5F3C12) - Additional Information

Gene ID 4000

**Other Names** Prelamin-A/C, Lamin-A/C, 70 kDa lamin, Renal carcinoma antigen NY-REN-32, LMNA, LMN1

Calculated MW 74 kDa KDa

**Application Details** Western blot, 0.25-0.5 μg/ml, Human, Mouse, Rat<br> Immunohistochemistry(Paraffin-embedded Section), 2-5 μg/ml, Human<br>

**Contents** Each vial contains 4 mg Trehalose, 0.9 mg NaCl and 0.2 mg Na2HPO4.

#### Immunogen

E.coli-derived human Lamin A/C recombinant protein (Position: Y481-Y646). Human Lamin A/C shares 90% and 92% amino acid (aa) sequence identity with mouse and rat Lamin A/C, respectively.

**Purification** Immunogen affinity purified.

Storage

At -20°C for one year from date of receipt. After reconstitution, at 4°C for one month. It can also be aliquotted and stored frozen at -20°C for six months. Avoid repeated

freezing and thawing.

#### Anti-Lamin A+C/LMNA Antibody Picoband<sup>™</sup> (monoclonal, 5F3C12) - Protein Information

Name LMNA

Synonyms LMN1

Function

[Lamin-A/C]: Lamins are intermediate filament proteins that assemble into a filamentous meshwork, and which constitute the major components of the nuclear lamina, a fibrous layer on the nucleoplasmic side of the inner nuclear membrane (PubMed: <a href="http://www.uniprot.org/citations/10080180" target=" blank">10080180</a>, PubMed:<a href="http://www.uniprot.org/citations/10580070" target="\_blank">10580070</a>, PubMed:<a href="http://www.uniprot.org/citations/10587585" target="\_blank">10587585</a>, PubMed:<a href="http://www.uniprot.org/citations/10814726" target="\_blank">10814726</a>, PubMed:<a href="http://www.uniprot.org/citations/11799477" target=" blank">11799477</a>, PubMed:<a href="http://www.uniprot.org/citations/12075506" target=" blank">12075506</a>, PubMed:<a href="http://www.uniprot.org/citations/12927431" target=" blank">12927431</a>, PubMed:<a href="http://www.uniprot.org/citations/15317753" target=" blank">15317753</a>, PubMed:<a href="http://www.uniprot.org/citations/18551513" target="\_blank">18551513</a>, PubMed:<a href="http://www.uniprot.org/citations/18611980" target="\_blank">18611980</a>, PubMed:<a href="http://www.uniprot.org/citations/2188730" target="\_blank">2188730</a>, PubMed:<a href="http://www.uniprot.org/citations/22431096" target=" blank">22431096</a>, PubMed:<a href="http://www.uniprot.org/citations/2344612" target=" blank">2344612</a>, PubMed:<a href="http://www.uniprot.org/citations/23666920" target=" blank">23666920</a>, PubMed:<a href="http://www.uniprot.org/citations/24741066" target="\_blank">24741066</a>, PubMed:<a href="http://www.uniprot.org/citations/31434876" target="\_blank">31434876</a>, PubMed:<a href="http://www.uniprot.org/citations/31548606" target="\_blank">31548606</a>, PubMed:<a href="http://www.uniprot.org/citations/37788673" target=" blank">37788673</a>, PubMed:<a href="http://www.uniprot.org/citations/37832547" target=" blank">37832547</a>). Lamins provide a framework for the nuclear envelope, bridging the nuclear envelope and chromatin, thereby playing an important role in nuclear assembly, chromatin organization, nuclear membrane and telomere dynamics (PubMed:<a href="http://www.uniprot.org/citations/10080180" target=" blank">10080180</a>, PubMed:<a href="http://www.uniprot.org/citations/10580070" target="\_blank">10580070</a>, PubMed:<a href="http://www.uniprot.org/citations/10587585" target="\_blank">10587585</a>, PubMed:<a href="http://www.uniprot.org/citations/10814726" target=" blank">10814726</a>, PubMed:<a href="http://www.uniprot.org/citations/11799477" target=" blank">11799477</a>, PubMed:<a href="http://www.uniprot.org/citations/12075506" target=" blank">12075506</a>. PubMed:<a href="http://www.uniprot.org/citations/12927431" target=" blank">12927431</a>, PubMed:<a href="http://www.uniprot.org/citations/15317753" target=" blank">15317753</a>, PubMed:<a href="http://www.uniprot.org/citations/18551513" target=" blank">18551513</a>, PubMed:<a href="http://www.uniprot.org/citations/18611980" target=" blank">18611980</a>, PubMed:<a href="http://www.uniprot.org/citations/22431096" target=" blank">22431096</a>, PubMed:<a href="http://www.uniprot.org/citations/23666920" target=" blank">23666920</a>, PubMed:<a href="http://www.uniprot.org/citations/24741066" target=" blank">24741066</a>, PubMed:<a href="http://www.uniprot.org/citations/31548606" target=" blank">31548606</a>, PubMed:<a href="http://www.uniprot.org/citations/37788673" target=" blank">37788673</a>, PubMed:<a href="http://www.uniprot.org/citations/37832547" target=" blank">37832547</a>). Lamin A and C also regulate matrix stiffness by conferring nuclear mechanical properties (PubMed: <a href="http://www.uniprot.org/citations/23990565" target=" blank">23990565</a>, PubMed:<a href="http://www.uniprot.org/citations/25127216" target=" blank">25127216</a>). The structural integrity of the lamina is strictly controlled by the cell cycle, as seen by the disintegration and formation of the nuclear envelope in prophase and telophase, respectively (PubMed: <a href="http://www.uniprot.org/citations/2188730" target=" blank">2188730</a>, PubMed:<a href="http://www.uniprot.org/citations/2344612"

target="\_blank">2344612</a>). Lamin A and C are present in equal amounts in the lamina of mammals (PubMed:<a href="http://www.uniprot.org/citations/10080180"

target=" blank">10080180</a>, PubMed:<a href="http://www.uniprot.org/citations/10580070" target=" blank">10580070</a>, PubMed:<a href="http://www.uniprot.org/citations/10587585" target=" blank">10587585</a>, PubMed:<a href="http://www.uniprot.org/citations/10814726" target=" blank">10814726</a>, PubMed:<a href="http://www.uniprot.org/citations/11799477" target=" blank">11799477</a>, PubMed:<a href="http://www.uniprot.org/citations/12075506" target=" blank">12075506</a>, PubMed:<a href="http://www.uniprot.org/citations/12927431" target=" blank">12927431</a>, PubMed:<a href="http://www.uniprot.org/citations/15317753" target="\_blank">15317753</a>, PubMed:<a href="http://www.uniprot.org/citations/18551513" target=" blank">18551513</a>, PubMed:<a href="http://www.uniprot.org/citations/18611980" target=" blank">18611980</a>, PubMed:<a href="http://www.uniprot.org/citations/22431096" target=" blank">22431096</a>, PubMed:<a href="http://www.uniprot.org/citations/23666920" target=" blank">23666920</a>, PubMed:<a href="http://www.uniprot.org/citations/31548606" target=" blank">31548606</a>). Also invoved in DNA repair: recruited by DNA repair proteins XRCC4 and IFFO1 to the DNA double-strand breaks (DSBs) to prevent chromosome translocation by immobilizing broken DNA ends (PubMed:<a href="http://www.uniprot.org/citations/31548606" target=" blank">31548606</a>). Required for normal development of peripheral nervous system and skeletal muscle and for muscle satellite cell proliferation (PubMed: <a href="http://www.uniprot.org/citations/10080180" target=" blank">10080180</a>, PubMed:<a href="http://www.uniprot.org/citations/10814726" target=" blank">10814726</a>, PubMed:<a href="http://www.uniprot.org/citations/11799477" target=" blank">11799477</a>, PubMed:<a href="http://www.uniprot.org/citations/18551513" target=" blank">18551513</a>, PubMed:<a href="http://www.uniprot.org/citations/22431096" target=" blank">22431096</a>). Required for osteoblastogenesis and bone formation (PubMed:<a href="http://www.uniprot.org/citations/12075506" target=" blank">12075506</a>, PubMed:<a href="http://www.uniprot.org/citations/15317753" target=" blank">15317753</a>, PubMed:<a href="http://www.uniprot.org/citations/18611980" target=" blank">18611980</a>). Also

prevents fat infiltration of muscle and bone marrow, helping to maintain the volume and strength of skeletal muscle and bone (PubMed:<a href="http://www.uniprot.org/citations/10587585" target="\_blank">10587585</a>). Required for cardiac homeostasis (PubMed:<a href="http://www.uniprot.org/citations/10580070" target="\_blank">10580070</a>, PubMed:<a href="http://www.uniprot.org/citations/12927431" target="\_blank">10580070</a>, PubMed:<a href="http://www.uniprot.org/citations/12927431" target="\_blank">12927431</a>, PubMed:<a href="http://www.uniprot.org/citations/18611980" target="\_blank">18611980</a>, PubMed:<a

# href="http://www.uniprot.org/citations/23666920" target="\_blank">23666920</a>).

#### **Cellular Location**

Nucleus lamina. Nucleus envelope. Nucleus, nucleoplasm. Nucleus matrix. Note=Farnesylation of prelamin-A/C facilitates nuclear envelope targeting and subsequent cleavage by ZMPSTE24/FACE1 to remove the farnesyl group produces mature lamin-A/C, which can then be inserted into the nuclear lamina (PubMed:15317753) EMD is required for proper localization of non-farnesylated prelamin- A/C (PubMed:19323649). Also localizes to the micronuclear envelope in response to response to genome instability (PubMed:37788673)

#### **Tissue Location**

In the arteries, prelamin-A/C accumulation is not observed in young healthy vessels but is prevalent in medial vascular smooth muscle cells (VSMCs) from aged individuals and in atherosclerotic lesions, where it often colocalizes with senescent and degenerate VSMCs. Prelamin-A/C expression increases with age and disease. In normal aging, the accumulation of prelamin-A/C is caused in part by the down-regulation of ZMPSTE24/FACE1 in response to oxidative stress.

# Anti-Lamin A+C/LMNA Antibody Picoband<sup>™</sup> (monoclonal, 5F3C12) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- <u>Blocking Peptides</u>
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

Anti-Lamin A+C/LMNA Antibody Picoband<sup>™</sup> (monoclonal, 5F3C12) - Images

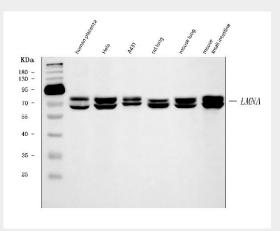

Figure 1. Western blot analysis of Lamin A+C/LMNA using anti-Lamin A+C/LMNA antibody (M00438-6).

Electrophoresis was performed on a 5-20% SDS-PAGE gel at 70V (Stacking gel) / 90V (Resolving gel) for 2-3 hours. The sample well of each lane was loaded with 30 ug of sample under reducing conditions.

Lane 1: human placenta tissue lysates,

Lane 2: human Hela whole cell lysates,

Lane 3: human A431 whole cell lysates,

Lane 4: rat lung tissue lysates,

Lane 5: mouse lung tissue lysates,

Lane 6: mouse small intestine tissue lysates.

After electrophoresis, proteins were transferred to a nitrocellulose membrane at 150 mA for 50-90 minutes. Blocked the membrane with 5% non-fat milk/TBS for 1.5 hour at RT. The membrane was incubated with mouse anti-Lamin A+C/LMNA antigen affinity purified monoclonal antibody (Catalog # M00438-6) at 0.5  $\mu$ g/mL overnight at 4°C, then washed with TBS-0.1%Tween 3 times with 5 minutes each and probed with a goat anti-mouse IgG-HRP secondary antibody at a dilution of 1:10000 for 1.5 hour at RT. The signal is developed using an Enhanced Chemiluminescent detection (ECL) kit (Catalog # EK1001) with Tanon 5200 system. A specific band was detected for Lamin A+C/LMNA at approximately 74 kDa. The expected band size for Lamin A+C/LMNA is at 70 kDa.

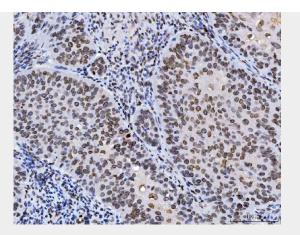

Figure 2. IHC analysis of Lamin A+C/LMNA using anti-Lamin A+C/LMNA antibody (M00438-6). Lamin A+C/LMNA was detected in a paraffin-embedded section of human laryngeal squamous cell carcinoma tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH 8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 2  $\mu$ g/ml mouse anti-Lamin A+C/LMNA Antibody (M00438-6) overnight at 4°C. Peroxidase Conjugated Goat Anti-mouse IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using HRP Conjugated Mouse IgG Super Vision Assay Kit (Catalog # SV0001) with DAB as the chromogen.

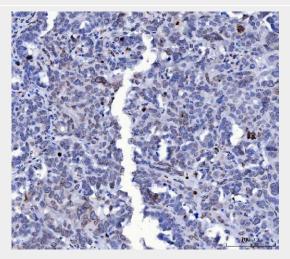

Figure 3. IHC analysis of Lamin A+C/LMNA using anti-Lamin A+C/LMNA antibody (M00438-6). Lamin A+C/LMNA was detected in a paraffin-embedded section of human ovarian cancer tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH 8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 2 µg/ml mouse anti-Lamin A+C/LMNA Antibody (M00438-6) overnight at 4°C. Peroxidase Conjugated Goat Anti-mouse IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using HRP Conjugated Mouse IgG Super Vision Assay Kit (Catalog # SV0001) with DAB as the chromogen.

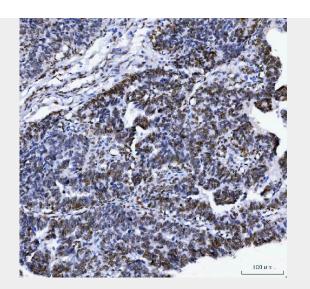

Figure 4. IHC analysis of Lamin A+C/LMNA using anti-Lamin A+C/LMNA antibody (M00438-6). Lamin A+C/LMNA was detected in a paraffin-embedded section of human bladder epithelial carcinoma tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH 8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 2  $\mu$ g/ml mouse anti-Lamin A+C/LMNA Antibody (M00438-6) overnight at 4°C. Peroxidase Conjugated Goat Anti-mouse IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using HRP Conjugated Mouse IgG Super Vision Assay Kit (Catalog # SV0001) with DAB as the chromogen.

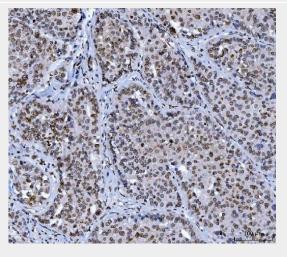

Figure 5. IHC analysis of Lamin A+C/LMNA using anti-Lamin A+C/LMNA antibody (M00438-6). Lamin A+C/LMNA was detected in a paraffin-embedded section of human liver cancer tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH 8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 2  $\mu$ g/ml mouse anti-Lamin A+C/LMNA Antibody (M00438-6) overnight at 4°C. Peroxidase Conjugated Goat Anti-mouse IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using HRP Conjugated Mouse IgG Super Vision Assay Kit (Catalog # SV0001) with DAB as the chromogen.

# Anti-Lamin A+C/LMNA Antibody Picoband<sup>™</sup> (monoclonal, 5F3C12) - Background

Lamins are structural protein components of the nuclear lamina, a protein network underlying the inner nuclear membrane that determines nuclear shape and size. There are three types of lamins, A,B and C. The lamin A/C (LMNA) gene contains 12 exons. Alternative splicing within exon 10 gives rise to two different mRNAs that code for pre-lamin A and lamin C. Lamin A/C is mapped to 1q21.2-q21.3 and mutations in this gene cause a variety of human diseases including

Emery-Dreifuss muscular dystrophy, dilated cardiomyopathy, and Hutchinson-Gilford progeria syndrome. Lamin A/C deficiency is thus associated with both defective nuclear mechanics and impaired mechanically activated gene transcription.
