Anti-phospho-Phospholipase C gamma 1/PLC-gamma-1 (Y1253) Rabbit Monoclonal Antibody - Protein Information

Name PLCG1 ([HGNC:9065](#))

Synonyms PLC1

Function

Mediates the production of the second messenger molecules diacylglycerol (DAG) and inositol 1,4,5-trisphosphate (IP3). Plays an important role in the regulation of intracellular signaling cascades. Becomes activated in response to ligand-mediated activation of receptor-type tyrosine kinases, such as PDGFRA, PDGFRB, EGFR, FGFR1, FGFR2, FGFR3 and FGFR4 (By similarity). Plays a role in actin reorganization and cell migration (PubMed:[17229814](http://www.uniprot.org/citations/17229814)). Guanine nucleotide exchange factor that binds the GTPase DNMI and catalyzes the dissociation of GDP, allowing a GTP molecule to bind in its place, therefore enhancing DNMI-dependent endocytosis (By similarity).

Cellular Location

Cell projection, lamellipodium. Cell projection, ruffle. Note=Rapidly redistributed to ruffles and lamellipodia structures in response to epidermal growth factor (EGF) treatment.
