

HMB-45

Mouse Monoclonal antibody(Mab)
Catalog # AD80079

Specification

HMB-45 - Product info

Application IHC-P, IHC
Primary Accession P40967
Reactivity Human
Host Mouse
Clonality Monoclonal
Calculated MW 70255

HMB-45 - Additional info

Gene ID 6490 Gene Name PMEL

Other Names

Melanocyte protein PMEL, ME20-M, ME20M, Melanocyte protein Pmel 17, Melanocytes lineage-specific antigen GP100, Melanoma-associated ME20 antigen, P1, P100, Premelanosome protein, Silver locus protein homolog, M-alpha, 95 kDa melanocyte-specific secreted glycoprotein, P26, Secreted melanoma-associated ME20 antigen, ME20-S, ME20S, M-beta, PMEL, D12S53E, PMEL17, SILV

Dilution

IHC-P~~Ready-to-use IHC~~Ready-to-use

Storage

Maintain refrigerated at 2-8°C

Precautions HMB-45 Antibody is for research use only

and not for use in diagnostic or

therapeutic procedures.

HMB-45 - Protein Information

Name PMEL

Synonyms D12S53E, PMEL17, SILV

Function

Plays a central role in the biogenesis of melanosomes. Involved in the maturation of melanosomes from stage I to II. The transition from stage I melanosomes to stage II melanosomes involves an elongation of the vesicle, and the

appearance within of distinct fibrillar structures. Release of the soluble form, ME20-S, could protect tumor cells from

Cellular Location

Tissue Location

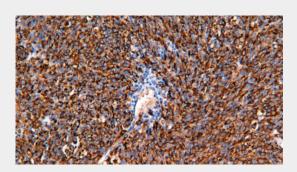

antibody mediated immunity. **Endoplasmic reticulum membrane;** Single-pass type I membrane protein. Golgi apparatus. Melanosome. Endosome, multivesicular body. Note=Identified by mass spectrometry in melanosome fractions from stage I to stage IV. Localizes predominantly to intralumenal vesicles (ILVs) within multivesicular bodies. Associates with ILVs found within the lumen of premelanosomes and melanosomes and particularly in compartments that serve as precursors to the striated stage II premelanosomes Preferentially expressed in melanomas. Some expression was found in dysplastic nevi. Not found in normal tissues nor in carcinomas. Normally expressed at low levels in quiescent adult melanocytes but overexpressed by proliferating neonatal melanocytes and during tumor growth

HMB-45 - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

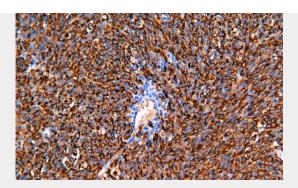

HMB-45 - Images

Malignant melanoma

Immunohistochemical analysis of paraffin-embedded human malignant melanoma tissue using AD80079 performed on the Abcarta® FAIP-30 Fully automated IHC platform. Tissue was fixed with formaldehyde at room temperature, antigen retrieval was by heat mediation with a Citrate buffer (pH6. 0). Samples were incubated with primary antibody (Ready-to-use) for 15 min at room temperature. AmpSeeTM Detection Systems Abcepta: AR005 was used as the secondary antibody.
