

MBP
Rabbit Monoclonal antibody(Mab)
Catalog # AD80097**Specification**

MBP - Product info

Application	IHC-P, IHC
Primary Accession	P02686
Reactivity	Human
Host	Rabbit
Clonality	Monoclonal
Calculated MW	33117

MBP - Additional info

Gene ID	4155
Gene Name	MBP

Other Names

Myelin basic protein, MBP, Myelin A1 protein, Myelin membrane encephalitogenic protein, MBP

Dilution

IHC-P~~Ready-to-use

IHC~~Ready-to-use

Storage

Maintain refrigerated at 2-8°C

Precautions

Myelin Basic Protein Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

MBP - Protein Information**Name** MBP**Function**

The classic group of MBP isoforms (isoform 4-isoform 14) are with PLP the most abundant protein components of the myelin membrane in the CNS. They have a role in both its formation and stabilization. The smaller isoforms might have an important role in remyelination of denuded axons in multiple sclerosis. The non-classic group of MBP isoforms (isoform 1-isoform 3/Golli-MBPs) may preferentially have a role in the early developing brain long before myelination, maybe as components of transcriptional complexes, and may also be involved in signaling

Cellular Location

Tissue Location

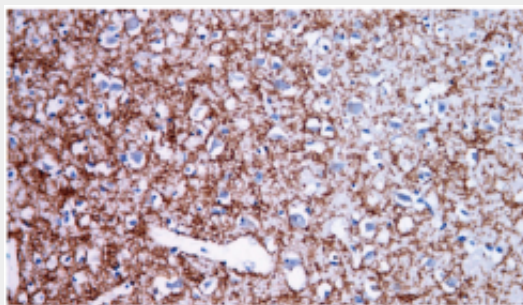

pathways in T- cells and neural cells. Differential splicing events combined with optional post-translational modifications give a wide spectrum of isomers, with each of them potentially having a specialized function. Induces T-cell proliferation. Myelin membrane; Peripheral membrane protein; Cytoplasmic side. Note=Cytoplasmic side of myelin MBP isoforms are found in both the central and the peripheral nervous system, whereas Golli-MBP isoforms are expressed in fetal thymus, spleen and spinal cord, as well as in cell lines derived from the immune system

MBP - Protocols

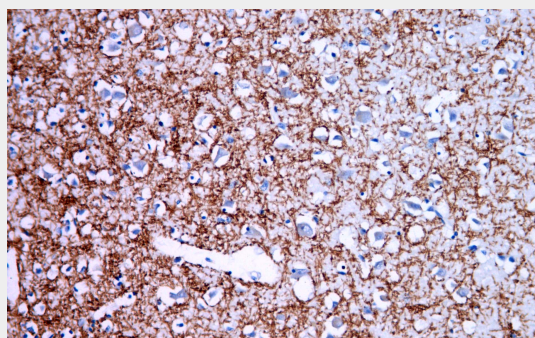

Provided below are standard protocols that you may find useful for product applications.

MBP - Images

Brain tissue

Immunohistochemical analysis of paraffin-embedded human brain tissue using AD80097

performed on the Abcarta® FAIP-30 Fully automated IHC platform. Tissue was fixed with formaldehyde at room temperature, antigen retrieval was by heat mediation with a Citrate buffer (pH 6.0). Samples were incubated with primary antibody (Ready-to-use) for 15 min at room temperature. AmpSee™ Detection Systems [Abcepta:AR005] was used as the secondary antibody.
