

C-Cbl Antibody (Y770)
Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AE1007a

Specification

C-Cbl Antibody (Y770) - Product Information

Application	IHC
Primary Accession	P22681
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Concentration	1mg/ml
Isotype	Rabbit IgG
Calculated MW	99633

C-Cbl Antibody (Y770) - Additional Information

Gene ID 867

Other Names

E3 ubiquitin-protein ligase CBL, 632-, Casitas B-lineage lymphoma proto-oncogene, Proto-oncogene c-Cbl, RING finger protein 55, Signal transduction protein CBL, CBL, CBL2, RNF55

Target/Specificity

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.

Dilution

IHC~~1:50~1:100

Format

affinity Purified IgG, in PBS, 0.02% sodium azide and 50% glycerol.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

C-Cbl Antibody (Y770) is for research use only and not for use in diagnostic or therapeutic procedures.

C-Cbl Antibody (Y770) - Protein Information

Name CBL

Synonyms CBL2, RNF55

Function

Adapter protein that functions as a negative regulator of many signaling pathways that are triggered by activation of cell surface receptors. Acts as an E3 ubiquitin-protein ligase, which accepts ubiquitin from specific E2 ubiquitin-conjugating enzymes, and then transfers it to substrates promoting their degradation by the proteasome (PubMed: [17094949](http://www.uniprot.org/citations/17094949)). Ubiquitinates SPRY2 (PubMed: [17094949](http://www.uniprot.org/citations/17094949)), PubMed: [17974561](http://www.uniprot.org/citations/17974561)). Ubiquitinates EGFR (PubMed: [17974561](http://www.uniprot.org/citations/17974561)). Recognizes activated receptor tyrosine kinases, including KIT, FLT1, FGFR1, FGFR2, PDGFRA, PDGFRB, CSF1R, EPHA8 and KDR and terminates signaling. Recognizes membrane-bound HCK, SRC and other kinases of the SRC family and mediates their ubiquitination and degradation. Participates in signal transduction in hematopoietic cells. Plays an important role in the regulation of osteoblast differentiation and apoptosis. Essential for osteoclastic bone resorption. The 'Tyr-731' phosphorylated form induces the activation and recruitment of phosphatidylinositol 3-kinase to the cell membrane in a signaling pathway that is critical for osteoclast function. May be functionally coupled with the E2 ubiquitin- protein ligase UB2D3. In association with CBLB, required for proper feedback inhibition of ciliary platelet-derived growth factor receptor- alpha (PDGFRA) signaling pathway via ubiquitination and internalization of PDGFRA (By similarity).

Cellular Location

Cytoplasm. Cell membrane. Cell projection, cilium. Golgi apparatus. Note=Colocalizes with FGFR2 in lipid rafts at the cell membrane

C-Cbl Antibody (Y770) - Protocols

Provided below are standard protocols that you may find useful for product applications.

Immunohistochemical analysis of paraffin-embedded human breast carcinoma tissue using C-Cbl Antibody (Y770) (#AE1007a).

C-Cbl Antibody (Y770) - Background

The cbl oncogene was first identified as part of a transforming retrovirus which induces mouse pre-B and pro-B cell lymphomas. As an adaptor protein for receptor protein-tyrosine kinases, it positively regulates receptor protein-tyrosine kinase ubiquitination in a manner dependent upon its variant SH2 and RING finger domains. Ubiquitination of receptor protein-tyrosine kinases terminates signaling by marking active receptors for degradation.
