

Goat Anti-MYD88 Antibody
Peptide-affinity purified goat antibody
Catalog # AF1701a**Specification**

Goat Anti-MYD88 Antibody - Product Information

Application	WB, IHC, EIA
Primary Accession	Q99836
Other Accession	NP_002459 , 4615 , 17874 (mouse) , 301059 (rat)
Reactivity	Human
Predicted	Mouse, Rat, Dog
Host	Goat
Clonality	Polyclonal
Concentration	100ug/200ul
Isotype	IgG
Calculated MW	33233

Goat Anti-MYD88 Antibody - Additional Information**Gene ID** 4615**Other Names**

Myeloid differentiation primary response protein MyD88, MYD88

Format

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Goat Anti-MYD88 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Goat Anti-MYD88 Antibody - Protein Information**Name** MYD88 ([HGNC:7562](#))**Function**

Adapter protein involved in the Toll-like receptor and IL-1 receptor signaling pathway in the innate immune response (PubMed:<[a href="http://www.uniprot.org/citations/15361868"](http://www.uniprot.org/citations/15361868)>15361868, PubMed:<[a href="http://www.uniprot.org/citations/18292575"](http://www.uniprot.org/citations/18292575)>18292575, PubMed:<[a href="http://www.uniprot.org/citations/33718825"](http://www.uniprot.org/citations/33718825)>33718825, PubMed:<[a href="http://www.uniprot.org/citations/37971847"](http://www.uniprot.org/citations/37971847)>37971847). Acts via IRAK1, IRAK2, IRF7 and TRAF6, leading to NF-kappa-B

activation, cytokine secretion and the inflammatory response (PubMed:15361868, PubMed:19506249, PubMed:24316379). Increases IL-8 transcription (PubMed:9013863). Involved in IL-18-mediated signaling pathway. Activates IRF1 resulting in its rapid migration into the nucleus to mediate an efficient induction of IFN-beta, NOS2/INOS, and IL12A genes. Upon TLR8 activation by GU-rich single-stranded RNA (GU- rich RNA) derived from viruses such as SARS-CoV-2, SARS-CoV and HIV-1, induces IL1B release through NLRP3 inflammasome activation (PubMed:33718825). MyD88-mediated signaling in intestinal epithelial cells is crucial for maintenance of gut homeostasis and controls the expression of the antimicrobial lectin REG3G in the small intestine (By similarity).

Goat Anti-MYD88 Antibody - Images

AF1701a staining (0.03 µg/ml) of human thymus lysate (RIPA buffer, 35 µg total protein per lane). Primary incubated for 1 hour. Detected by western blot using chemiluminescence.

AF1701a (4 µg/ml) staining of paraffin embedded Human Tonsil. Steamed antigen retrieval with Tris/EDTA buffer pH 9, HRP-staining. These results could not be obtained after antigen retrieval at pH6 with this batch of antibody.

AF1701a (5ug/ml) as the reporter with EB002006 as the capture rabbit antibody (5ug/ml).

Goat Anti-MYD88 Antibody - Background

This gene encodes a cytosolic adapter protein that plays a central role in the innate and adaptive immune response. This protein functions as an essential signal transducer in the interleukin-1 and Toll-like receptor signaling pathways. These pathways regulate that activation of numerous proinflammatory genes. The encoded protein consists of an N-terminal death domain and a C-terminal Toll-interleukin1 receptor domain. Patients with defects in this gene have an increased susceptibility to pyogenic bacterial infections. Alternate splicing results in multiple transcript variants.
