

**Goat Anti-MYD88 Antibody**  
Peptide-affinity purified goat antibody  
Catalog # AF1701a

### Specification

---

#### Goat Anti-MYD88 Antibody - Product Information

Application	WB, IHC, EIA
Primary Accession	<a href="#">Q99836</a>
Other Accession	<a href="#">NP_002459</a> , <a href="#">4615</a> , <a href="#">17874 (mouse)</a> , <a href="#">301059 (rat)</a>
Reactivity	Human
Predicted	Mouse, Rat, Dog
Host	Goat
Clonality	Polyclonal
Concentration	100ug/200ul
Isotype	IgG
Calculated MW	33233

#### Goat Anti-MYD88 Antibody - Additional Information

**Gene ID** 4615

#### Other Names

Myeloid differentiation primary response protein MyD88, MYD88

#### Format

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

#### Precautions

Goat Anti-MYD88 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

#### Goat Anti-MYD88 Antibody - Protein Information

**Name** MYD88 ([HGNC:7562](#))

#### Function

Adapter protein involved in the Toll-like receptor and IL-1 receptor signaling pathway in the innate immune response (PubMed: [15361868](http://www.uniprot.org/citations/15361868) target="\_blank">15361868</a>, PubMed: [18292575](http://www.uniprot.org/citations/18292575) target="\_blank">18292575</a>, PubMed: [33718825](http://www.uniprot.org/citations/33718825) target="\_blank">33718825</a>, PubMed: [37971847](http://www.uniprot.org/citations/37971847) target="\_blank">37971847</a>). Acts via IRAK1, IRAK2, IRF7 and TRAF6, leading to NF-kappa-B

activation, cytokine secretion and the inflammatory response (PubMed:<a href="http://www.uniprot.org/citations/15361868" target="\_blank">15361868</a>, PubMed:<a href="http://www.uniprot.org/citations/19506249" target="\_blank">19506249</a>, PubMed:<a href="http://www.uniprot.org/citations/24316379" target="\_blank">24316379</a>). Increases IL-8 transcription (PubMed:<a href="http://www.uniprot.org/citations/9013863" target="\_blank">9013863</a>). Involved in IL-18-mediated signaling pathway. Activates IRF1 resulting in its rapid migration into the nucleus to mediate an efficient induction of IFN-beta, NOS2/INOS, and IL12A genes. Upon TLR8 activation by GU-rich single-stranded RNA (GU-rich RNA) derived from viruses such as SARS-CoV-2, SARS-CoV and HIV-1, induces IL1B release through NLRP3 inflammasome activation (PubMed:<a href="http://www.uniprot.org/citations/33718825" target="\_blank">33718825</a>). MyD88-mediated signaling in intestinal epithelial cells is crucial for maintenance of gut homeostasis and controls the expression of the antimicrobial lectin REG3G in the small intestine (By similarity).

#### Cellular Location

Cytoplasm. Nucleus

#### Tissue Location

Ubiquitous..

### Goat Anti-MYD88 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### Goat Anti-MYD88 Antibody - Images

AF1701a staining (0.03 µg/ml) of human thymus lysate (RIPA buffer, 35 µg total protein per lane). Primary incubated for 1 hour. Detected by western blot using chemiluminescence.

AF1701a (4 µg/ml) staining of paraffin embedded Human Tonsil. Steamed antigen retrieval with Tris/EDTA buffer pH 9, HRP-staining. These results could not be obtained after antigen retrieval at pH6 with this batch of antibody.

AF1701a (5ug/ml) as the reporter with EB002006 as the capture rabbit antibody (5ug/ml).

### Goat Anti-MYD88 Antibody - Background

This gene encodes a cytosolic adapter protein that plays a central role in the innate and adaptive immune response. This protein functions as an essential signal transducer in the interleukin-1 and Toll-like receptor signaling pathways. These pathways regulate that activation of numerous proinflammatory genes. The encoded protein consists of an N-terminal death domain and a C-terminal Toll-interleukin1 receptor domain. Patients with defects in this gene have an increased susceptibility to pyogenic bacterial infections. Alternate splicing results in multiple transcript variants.
