

**Goat Anti-Plasminogen Activator / PLAU Antibody**  
Peptide-affinity purified goat antibody  
Catalog # AF1839a

### Specification

---

#### Goat Anti-Plasminogen Activator / PLAU Antibody - Product Information

Application	WB
Primary Accession	<a href="#">P00749</a>
Other Accession	<a href="#">NP_001138503</a> , <a href="#">5328</a>
Reactivity	Human
Host	Goat
Clonality	Polyclonal
Concentration	0.5mg/ml
Isotype	IgG
Calculated MW	48523

#### Goat Anti-Plasminogen Activator / PLAU Antibody - Additional Information

Gene ID 5328

#### Other Names

Urokinase-type plasminogen activator, U-plasminogen activator, uPA, 3.4.21.73, Urokinase-type plasminogen activator long chain A, Urokinase-type plasminogen activator short chain A, Urokinase-type plasminogen activator chain B, PLAU

#### Format

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

#### Precautions

Goat Anti-Plasminogen Activator / PLAU Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

#### Goat Anti-Plasminogen Activator / PLAU Antibody - Protein Information

Name PLAU ([HGNC:9052](#))

#### Function

Specifically cleaves the zymogen plasminogen to form the active enzyme plasmin.

#### Cellular Location

Secreted.

**Tissue Location**

Expressed in the prostate gland and prostate cancers.

**Goat Anti-Plasminogen Activator / PLAU Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

**Goat Anti-Plasminogen Activator / PLAU Antibody - Images**

AF1839a (0.3 µg/ml) staining of 293 lysate (35 µg protein in RIPA buffer). Primary incubation was 1 hour. Detected by chemiluminescence.

**Goat Anti-Plasminogen Activator / PLAU Antibody - Background**

This gene encodes a serine protease involved in degradation of the extracellular matrix and possibly tumor cell migration and proliferation. A specific polymorphism in this gene may be associated with late-onset Alzheimer's disease and also with decreased affinity for fibrin-binding. This protein converts plasminogen to plasmin by specific cleavage of an Arg-Val bond in plasminogen. Plasmin in turn cleaves this protein at a Lys-Ile bond to form a two-chain derivative in which a single disulfide bond connects the amino-terminal A-chain to the catalytically active, carboxy-terminal B-chain. This two-chain derivative is also called HMW-uPA (high molecular weight uPA). HMW-uPA can be further processed into LMW-uPA (low molecular weight uPA) by cleavage of chain A into a short chain A (A1) and an amino-terminal fragment. LMW-uPA is proteolytically active but does not bind to the uPA receptor. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.

**Goat Anti-Plasminogen Activator / PLAU Antibody - References**

Tumour budding, uPA and PAI-1 are associated with aggressive behaviour in colon cancer. Mørkl B, et al. J Surg Oncol, 2010 Sep 1. PMID 20740581.
