Dopamine receptor D4 / DRD4 Antibody (internal region) - Protein Information

Name DRD4

Function

Dopamine receptor responsible for neuronal signaling in the mesolimbic system of the brain, an area of the brain that regulates emotion and complex behavior. Activated by dopamine, but also by epinephrine and norepinephrine, and by numerous synthetic agonists and drugs (PubMed: [16423344](http://www.uniprot.org/citations/16423344), PubMed: [27659709](http://www.uniprot.org/citations/27659709), PubMed: [29051383](http://www.uniprot.org/citations/29051383), PubMed: [9003072](http://www.uniprot.org/citations/9003072)). Agonist binding triggers signaling via G proteins that inhibit adenylyl cyclase (PubMed: [a](#)

Cellular Location

Cell membrane; Multi-pass membrane protein

Tissue Location

Highly expressed in retina. Detected at much lower levels in brain, in amygdala, thalamus, hypothalamus, cerebellum and pituitary.
