DYNC1H1 Antibody (internal region) - Protein Information

Name DYNC1H1 ([HGNC:2961](#))

Function

Cytoplasmic dynein 1 acts as a motor for the intracellular retrograde motility of vesicles and organelles along microtubules. Dynein has ATPase activity; the force-producing power stroke is thought to occur on release of ADP. Plays a role in mitotic spindle assembly and metaphase plate congression (PubMed: <http://www.uniprot.org/citations/27462074> target="_blank">27462074).

Cellular Location

Cytoplasm, cytoskeleton
