

**Goat Anti-fibrinogen alpha chain Antibody**  
Peptide-affinity purified goat antibody  
Catalog # AF4129a

**Specification**

---

**Goat Anti-fibrinogen alpha chain Antibody - Product Information**

Application	WB, E
Primary Accession	<a href="#">P02671</a>
Other Accession	<a href="#">NP_000499.1</a> , <a href="#">NP_068657.1</a> , <a href="#">2243</a>
Reactivity	Human
Host	Goat
Clonality	Polyclonal
Concentration	0.5 mg/ml
Isotype	IgG
Calculated MW	94973

**Goat Anti-fibrinogen alpha chain Antibody - Additional Information**

**Gene ID** 2243

**Other Names**

Fibrinogen alpha chain, Fibrinopeptide A, Fibrinogen alpha chain, FGA

**Format**

0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin

**Immunogen**

Peptide with sequence C-STSYNRGDSTFES, from the internal region (near C terminus) of the protein sequence according to [NP\\_000499.1](#); [NP\\_068657.1](#). Please note the peptide is available for sale.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

Goat Anti-fibrinogen alpha chain Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**Goat Anti-fibrinogen alpha chain Antibody - Protein Information**

**Name** FGA

**Function**

Cleaved by the protease thrombin to yield monomers which, together with fibrinogen beta (FGB) and fibrinogen gamma (FGG), polymerize to form an insoluble fibrin matrix. Fibrin has a major function in hemostasis as one of the primary components of blood clots. In addition, functions

during the early stages of wound repair to stabilize the lesion and guide cell migration during re-epithelialization. Was originally thought to be essential for platelet aggregation, based on in vitro studies using anticoagulated blood. However, subsequent studies have shown that it is not absolutely required for thrombus formation in vivo. Enhances expression of SELP in activated platelets via an ITGB3-dependent pathway. Maternal fibrinogen is essential for successful pregnancy. Fibrin deposition is also associated with infection, where it protects against IFNG-mediated hemorrhage. May also facilitate the immune response via both innate and T-cell mediated pathways.

**Cellular Location**

Secreted

**Tissue Location**

Detected in blood plasma (at protein level).

**Goat Anti-fibrinogen alpha chain Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

**Goat Anti-fibrinogen alpha chain Antibody - Images****Goat Anti-fibrinogen alpha chain Antibody - Background**

This antibody is expected to recognize both reported isoforms (NP\_000499.1; NP\_068657.1).
