Retinol Binding Protein-1 (RBP1) Antibody - With BSA and Azide - Protein Information

Name RBP4

Function

Retinol-binding protein that mediates retinol transport in blood plasma (PubMed: [5541771](http://www.uniprot.org/citations/5541771)). Delivers retinol from the liver stores to the peripheral tissues (Probable). Transfers the bound all-trans retinol to STRA6, that then facilitates retinol transport across the cell membrane (PubMed: [22665496](http://www.uniprot.org/citations/22665496)).

Cellular Location

Secreted

Tissue Location

Detected in blood plasma and in urine (at protein level).

Retinol Binding Protein-1 (RBP1) Antibody - With BSA and Azide - Background

Recognizes a protein of 21kDa-25kDa, identified as retinol binding protein-1 (RBP1). This protein belongs to the lipocalin family and is the specific carrier for retinol (vitamin A alcohol) in the blood. It delivers retinol from the liver stores to the peripheral tissues. In plasma, the RBP-retinol complex interacts with transthyretin, which prevents its loss by filtration through the kidney glomeruli. A deficiency of vitamin A blocks secretion of the binding protein post-transnationally and results in defective delivery and supply to the epidermal cells.
