

Anti-p53 Tumor Suppressor Protein Antibody

Recombinant Rabbit Monoclonal Antibody Catalog # AH13550

# Specification

# Anti-p53 Tumor Suppressor Protein Antibody - Product Information

Application Primary Accession Other Accession Reactivity Host Clonality Isotype Calculated MW ,1,14,3,4, <u>P04637</u> <u>654481</u> Human Rabbit Monoclonal Rabbit / IgG, kappa 43653

## Anti-p53 Tumor Suppressor Protein Antibody - Additional Information

Gene ID 7157

**Other Names** Antigen NY-CO-13, BCC7, Cellular Tumor Antigen p53, LFS1, TP53, Transformation Related Protein 53 (TRP53), Tumor Protein p53, Tumor Suppressor p53

Format

200ug/ml of recombinant MAb purified by Protein A/G. Prepared in 10mM PBS with 0.05% BSA & 0.05% azide. Also available WITHOUT BSA & azide at 1.0mg/ml.

Storage

Store at 2 to 8°C.Antibody is stable for 24 months.

**Precautions** 

Anti-p53 Tumor Suppressor Protein Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

## Anti-p53 Tumor Suppressor Protein Antibody - Protein Information

Name TP53

Synonyms P53

Function

```
Multifunctional transcription factor that induces cell cycle arrest, DNA repair or apoptosis upon
binding to its target DNA sequence (PubMed:<a href="http://www.uniprot.org/citations/11025664"
target="_blank">11025664</a>, PubMed:<a href="http://www.uniprot.org/citations/12524540"
target="_blank">12524540</a>, PubMed:<a href="http://www.uniprot.org/citations/12810724"
target="_blank">12810724</a>, PubMed:<a href="http://www.uniprot.org/citations/15186775"
target="_blank">15186775</a>, PubMed:<a href="http://www.uniprot.org/citations/15340061"
target="_blank">15186775</a>, PubMed:<a href="http://www.uniprot.org/citations/15340061"
target="_blank">15340061</a>, PubMed:<a href="http://www.uniprot.org/citations/17317671"
```

target=" blank">17317671</a>, PubMed:<a href="http://www.uniprot.org/citations/17349958" target=" blank">17349958</a>, PubMed:<a href="http://www.uniprot.org/citations/19556538" target=" blank">19556538</a>, PubMed:<a href="http://www.uniprot.org/citations/20673990" target=" blank">20673990</a>, PubMed:<a href="http://www.uniprot.org/citations/20959462" target=" blank">20959462</a>, PubMed:<a href="http://www.uniprot.org/citations/22726440" target=" blank">22726440</a>, PubMed:<a href="http://www.uniprot.org/citations/24051492" target=" blank">24051492</a>, PubMed:<a href="http://www.uniprot.org/citations/24652652" target=" blank">24652652</a>, PubMed:<a href="http://www.uniprot.org/citations/35618207" target=" blank">35618207</a>, PubMed:<a href="http://www.uniprot.org/citations/36634798" target=" blank">36634798</a>, PubMed:<a href="http://www.uniprot.org/citations/38653238" target="\_blank">38653238</a>, PubMed:<a href="http://www.uniprot.org/citations/9840937" target=" blank">9840937</a>). Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type (PubMed:<a href="http://www.uniprot.org/citations/11025664" target=" blank">11025664</a>, PubMed:<a href="http://www.uniprot.org/citations/12524540" target=" blank">12524540</a>, PubMed:<a href="http://www.uniprot.org/citations/12810724" target=" blank">12810724</a>, PubMed:<a href="http://www.uniprot.org/citations/15186775" target=" blank">15186775</a>, PubMed:<a href="http://www.uniprot.org/citations/15340061" target="\_blank">15340061</a>, PubMed:<a href="http://www.uniprot.org/citations/17189187" target=" blank">17189187</a>, PubMed:<a href="http://www.uniprot.org/citations/17317671" target=" blank">17317671</a>, PubMed:<a href="http://www.uniprot.org/citations/17349958" target=" blank">17349958</a>, PubMed:<a href="http://www.uniprot.org/citations/19556538" target=" blank">19556538</a>, PubMed:<a href="http://www.uniprot.org/citations/20673990" target=" blank">20673990</a>, PubMed:<a href="http://www.uniprot.org/citations/20959462" target=" blank">20959462</a>, PubMed:<a href="http://www.uniprot.org/citations/22726440" target="\_blank">22726440</a>, PubMed:<a href="http://www.uniprot.org/citations/24051492" target=" blank">24051492</a>, PubMed:<a href="http://www.uniprot.org/citations/24652652" target=" blank">24652652</a>, PubMed:<a href="http://www.uniprot.org/citations/38653238" target=" blank">38653238</a>, PubMed:<a href="http://www.uniprot.org/citations/9840937" target=" blank">9840937</a>). Negatively regulates cell division by controlling expression of a set of genes required for this process (PubMed:<a href="http://www.uniprot.org/citations/11025664" target=" blank">11025664</a>, PubMed:<a href="http://www.uniprot.org/citations/12524540" target=" blank">12524540</a>, PubMed:<a href="http://www.uniprot.org/citations/12810724" target=" blank">12810724</a>, PubMed:<a href="http://www.uniprot.org/citations/15186775" target=" blank">15186775</a>, PubMed:<a href="http://www.uniprot.org/citations/15340061" target=" blank">15340061</a>, PubMed:<a href="http://www.uniprot.org/citations/17317671" target=" blank">17317671</a>, PubMed:<a href="http://www.uniprot.org/citations/17349958" target="\_blank">17349958</a>, PubMed: <a href="http://www.uniprot.org/citations/19556538" target=" blank">19556538</a>, PubMed:<a href="http://www.uniprot.org/citations/20673990" target="\_blank">20673990</a>, PubMed:<a href="http://www.uniprot.org/citations/20959462" target="\_blank">20959462</a>, PubMed:<a href="http://www.uniprot.org/citations/22726440" target="\_blank">22726440</a>, PubMed:<a href="http://www.uniprot.org/citations/24051492" target=" blank">24051492</a>, PubMed:<a href="http://www.uniprot.org/citations/24652652" target=" blank">24652652</a>. PubMed:<a href="http://www.uniprot.org/citations/9840937" target=" blank">9840937</a>). One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of Bcl-2 expression (PubMed:<a href="http://www.uniprot.org/citations/12524540" target=" blank">12524540</a>, PubMed:<a href="http://www.uniprot.org/citations/17189187" target=" blank">17189187</a>). Its pro-apoptotic activity is activated via its interaction with PPP1R13B/ASPP1 or TP53BP2/ASPP2 (PubMed:<a href="http://www.uniprot.org/citations/12524540" target=" blank">12524540</a>). However, this activity is inhibited when the interaction with PPP1R13B/ASPP1 or TP53BP2/ASPP2 is displaced by PPP1R13L/iASPP (PubMed:<a href="http://www.uniprot.org/citations/12524540" target=" blank">12524540</a>). In cooperation with mitochondrial PPIF is involved in activating

oxidative stress-induced necrosis; the function is largely independent of transcription. Induces the transcription of long intergenic non-coding RNA p21 (lincRNA-p21) and lincRNA-MkIn1.

LincRNA-p21 participates in TP53-dependent transcriptional repression leading to apoptosis and

seems to have an effect on cell-cycle regulation. Implicated in Notch signaling cross-over. Prevents CDK7 kinase activity when associated to CAK complex in response to DNA damage, thus stopping cell cycle progression. Isoform 2 enhances the transactivation activity of isoform 1 from some but not all TP53-inducible promoters. Isoform 4 suppresses transactivation activity and impairs growth suppression mediated by isoform 1. Isoform 7 inhibits isoform 1-mediated apoptosis. Regulates the circadian clock by repressing CLOCK-BMAL1-mediated transcriptional activation of PER2 (PubMed:<a href="http://www.uniprot.org/citations/24051492" target="\_blank">24051492</a>).

#### **Cellular Location**

Cytoplasm. Nucleus. Nucleus, PML body. Endoplasmic reticulum. Mitochondrion matrix. Cytoplasm, cytoskeleton, microtubule organizing center, centrosome Note=Recruited into PML bodies together with CHEK2 (PubMed:12810724) Translocates to mitochondria upon oxidative stress (PubMed:22726440) Translocates to mitochondria in response to mitomycin C treatment (PubMed:27323408). Competitive inhibition of TP53 interaction with HSPA9/MOT-2 by UBXN2A results in increased protein abundance and subsequent translocation of TP53 to the nucleus (PubMed:24625977) [Isoform 2]: Nucleus. Cytoplasm. Note=Localized mainly in the nucleus with minor staining in the cytoplasm [Isoform 4]: Nucleus. Cytoplasm. Note=Predominantly nuclear but translocates to the cytoplasm following cell stress [Isoform 8]: Nucleus. Cytoplasm. Note=Localized in both nucleus and cytoplasm in most cells. In some cells, forms foci in the nucleus that are different from nucleoli

#### **Tissue Location**

Ubiquitous. Isoforms are expressed in a wide range of normal tissues but in a tissue-dependent manner. Isoform 2 is expressed in most normal tissues but is not detected in brain, lung, prostate, muscle, fetal brain, spinal cord and fetal liver. Isoform 3 is expressed in most normal tissues but is not detected in lung, spleen, testis, fetal brain, spinal cord and fetal liver. Isoform 7 is expressed in most normal tissues but is not detected only in colon, bone marrow, testis, fetal brain and intestine. Isoform 9 is expressed in most normal tissues but is not detected in brain, heart, lung, fetal liver, salivary gland, breast or intestine

## Anti-p53 Tumor Suppressor Protein Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

# Anti-p53 Tumor Suppressor Protein Antibody - Background

Recognizes a 53kDa protein, which is identified as p53 suppressor gene product. It reacts with the mutant as well as the wild form of p53 protein. p53 is a tumor suppressor gene expressed in a wide variety of tissue types and is involved in regulating cell growth, replication, and apoptosis. It binds to MDM2, SV40 T antigen and human papilloma virus E6 protein. Positive nuclear staining with p53 antibody has been reported to be a negative prognostic factor in breast carcinoma, lung carcinoma, colorectal, and urothelial carcinoma. Anti-p53 positivity has also been used to differentiate uterine serous carcinoma from endometrioid carcinoma as well as to detect intratubular germ cell neoplasia. Mutations involving p53 are found in a wide variety of malignant tumors, including breast, ovarian, bladder, colon, lung, and melanoma.
