

BAT1 antibody - C-terminal region
Rabbit Polyclonal Antibody
Catalog # AI10971**Specification**

BAT1 antibody - C-terminal region - Product Information

Application	WB
Primary Accession	O13838
Other Accession	NM_080598 , NP_542165
Reactivity	Human, Mouse, Rat, Rabbit, Zebrafish, Pig, Goat, Horse, Bovine, Dog
Predicted Host	Human, Zebrafish, Goat
Clonality	Rabbit
Calculated MW	Polyclonal 47kDa KDa

BAT1 antibody - C-terminal region - Additional Information**Gene ID** 7919**Alias Symbol** **BAT1, UAP56, D6S81E****Other Names**

Spliceosome RNA helicase DDX39B, 3.6.4.13, 56 kDa U2AF65-associated protein, ATP-dependent RNA helicase p47, DEAD box protein UAP56, HLA-B-associated transcript 1 protein, DDX39B, BAT1, UAP56

Format

Liquid. Purified antibody supplied in 1x PBS buffer with 0.09% (w/v) sodium azide and 2% sucrose.

Reconstitution & Storage

Add 50 ul of distilled water. Final anti-BAT1 antibody concentration is 1 mg/ml in PBS buffer with 2% sucrose. For longer periods of storage, store at 20°C. Avoid repeat freeze-thaw cycles.

Precautions

BAT1 antibody - C-terminal region is for research use only and not for use in diagnostic or therapeutic procedures.

BAT1 antibody - C-terminal region - Protein Information**Name** DDX39B ([HGNC:13917](#))**Synonyms** BAT1, UAP56**Function**

Involved in nuclear export of spliced and unspliced mRNA. Assembling component of the TREX complex which is thought to couple mRNA transcription, processing and nuclear export, and specifically associates with spliced mRNA and not with unspliced pre-mRNA. TREX is recruited to spliced mRNAs by a transcription-independent mechanism, binds to mRNA upstream of the

exon-junction complex (EJC) and is recruited in a splicing- and cap-dependent manner to a region near the 5' end of the mRNA where it functions in mRNA export to the cytoplasm via the TAP/NFX1 pathway. May undergo several rounds of ATP hydrolysis during assembly of TREX to drive subsequent loading of components such as ALYREF/THOC and CHTOP onto mRNA. Also associates with pre-mRNA independent of ALYREF/THOC4 and the THO complex. Involved in the nuclear export of intronless mRNA; the ATP-bound form is proposed to recruit export adapter ALYREF/THOC4 to intronless mRNA; its ATPase activity is cooperatively stimulated by RNA and ALYREF/THOC4 and ATP hydrolysis is thought to trigger the dissociation from RNA to allow the association of ALYREF/THOC4 and the NXF1-NXT1 heterodimer. Involved in transcription elongation and genome stability.

Cellular Location

Nucleus. Nucleus speckle. Cytoplasm. Note=Can translocate to the cytoplasm in the presence of MX1. TREX complex assembly seems to occur in regions surrounding nuclear speckles known as perispeckles

BAT1 antibody - C-terminal region - Protocols

Provided below are standard protocols that you may find useful for product applications.

WB Suggested Anti-BAT1 Antibody Titration: 0.2-1 μ g/ml

ELISA Titer: 1:12500

Positive Control: Jurkat cell lysate

DDX39B is supported by BioGPS gene expression data to be expressed in Jurkat
