**ALDH4A1 antibody - C-terminal region - Protein Information****Name** ALDH4A1**Synonyms** ALDH4, P5CDH**Function**

Irreversible conversion of delta-1-pyrroline-5-carboxylate (P5C), derived either from proline or ornithine, to glutamate. This is a necessary step in the pathway interconnecting the urea and tricarboxylic acid cycles. The preferred substrate is glutamic gamma- semialdehyde, other

substrates include succinic, glutaric and adipic semialdehydes.

#### Cellular Location

Mitochondrion matrix.

#### Tissue Location

Highest expression is found in liver followed by skeletal muscle, kidney, heart, brain, placenta, lung and pancreas
