**BMPR1A Antibody - N-terminal region - Protein Information**

**Name** BMPR1A

**Synonyms** ACVRLK3, ALK3

**Function**

On ligand binding, forms a receptor complex consisting of two type II and two type I transmembrane serine/threonine kinases. Type II receptors phosphorylate and activate type I receptors which autophosphorylate, then bind and activate SMAD transcriptional regulators. Receptor for BMP2, BMP4, GDF5 and GDF6. Positively regulates chondrocyte differentiation through GDF5 interaction. Mediates induction of adipogenesis by GDF6. May promote the

expression of HAMP, potentially via its interaction with BMP2 (By similarity).

#### Cellular Location

Cell membrane; Single-pass type I membrane protein. Cell surface  
{ECO:0000250|UniProtKB:P36895}

#### Tissue Location

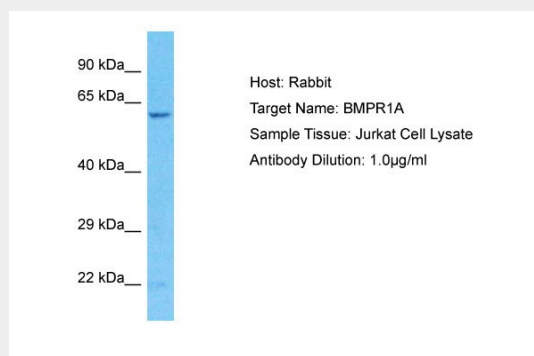

Highly expressed in skeletal muscle.
