2ABA Antibody - N-terminal region - Protein Information

Name PPP2R2A

Function

The B regulatory subunit might modulate substrate selectivity and catalytic activity, and also might direct the localization of the catalytic enzyme to a particular subcellular compartment. Essential for serine/threonine-protein phosphatase 2A-mediated dephosphorylation of WEE1, preventing its ubiquitin-mediated proteolysis, increasing WEE1 protein levels, and promoting the G2/M checkpoint (PubMed: <http://www.uniprot.org/citations/33108758> target="_blank">33108758).

Tissue Location

Expressed in all tissues examined.
