Leukotriene B4 Receptor / BLT1 Antibody (Cytoplasmic Domain) - Protein Information

Name LTB4R

Synonyms BLT, BLT1, BLTR, CMKRL1, GPR16, P2RY7

Function

Receptor for extracellular ATP > UTP and ADP. The activity of this receptor is mediated by G proteins which activate a phosphatidylinositol-calcium second messenger system. May be the cardiac P2Y receptor involved in the regulation of cardiac muscle contraction through modulation of L-type calcium currents. Is a receptor for leukotriene B4, a potent chemoattractant involved in inflammation and immune response.

Cellular Location

Cell membrane; Multi-pass membrane protein.

Tissue Location

Expressed at highest levels in heart, skeletal muscle and at lower levels in brain and liver. High level of expression in lymphoid tissues

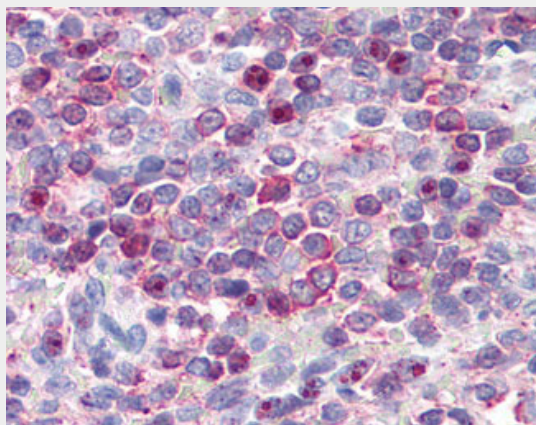

Volume

50 μ l
