**VDAC2 Antibody (C-Terminus) - Protein Information****Name** VDAC2**Function**

Forms a channel through the mitochondrial outer membrane that allows diffusion of small hydrophilic molecules (PubMed:[38065946](http://www.uniprot.org/citations/38065946)). The channel adopts an open conformation at low or zero membrane potential and a closed conformation at potentials above 30-40 mV (By similarity). The open state has a weak anion selectivity whereas the closed state is cation-selective (By similarity). Binds various lipids, including the sphingolipid ceramide, the phospholipid phosphatidylcholine, and the sterols cholesterol and oxysterol (PubMed:[31015432](http://www.uniprot.org/citations/31015432)). Binding of ceramide promotes the mitochondrial outer membrane permeabilization (MOMP) apoptotic pathway (PubMed:[31015432](http://www.uniprot.org/citations/31015432)).

### Cellular Location

Mitochondrion outer membrane. Membrane. Note=May localize to non-mitochondrial membranes.

### Tissue Location

Expressed in erythrocytes (at protein level) (PubMed:27641616). Expressed in all tissues examined (PubMed:8420959)
