TNFRSF1A / TNFR1 Antibody - Protein Information**Name** TNFRSF1A**Synonyms** TNFAR, TNFR1**Function**

Receptor for TNFSF2/TNF-alpha and homotrimeric TNFSF1/lymphotoxin-alpha. The adapter molecule FADD recruits caspase-8 to the activated receptor. The resulting death-inducing signaling complex (DISC) performs caspase-8 proteolytic activation which initiates the subsequent cascade of caspases (aspartate-specific cysteine proteases) mediating apoptosis. Contributes to the induction of non-cytocidal TNF effects including anti-viral state and activation of the acid sphingomyelinase.

Cellular Location

Cell membrane; Single-pass type I membrane protein Golgi apparatus membrane; Single-pass

type I membrane protein. Secreted. Note=A secreted form is produced through proteolytic processing
