

ALB / Serum Albumin Antibody (clone 2H3D1;8F6F9)
Mouse Monoclonal Antibody
Catalog # ALS13047

Specification

ALB / Serum Albumin Antibody (clone 2H3D1;8F6F9) - Product Information

Application	WB, IHC
Primary Accession	P02768
Reactivity	Human
Host	Mouse
Clonality	Monoclonal
Calculated MW	69kDa kDa

ALB / Serum Albumin Antibody (clone 2H3D1;8F6F9) - Additional Information

Gene ID 213

Other Names

Serum albumin, ALB

Target/Specificity

human albumin

Reconstitution & Storage

Long term: -20°C; Short term: +4°C. Avoid repeat freeze-thaw cycles.

Precautions

ALB / Serum Albumin Antibody (clone 2H3D1;8F6F9) is for research use only and not for use in diagnostic or therapeutic procedures.

ALB / Serum Albumin Antibody (clone 2H3D1;8F6F9) - Protein Information

Name ALB

Function

Binds water, Ca(2+), Na(+), K(+), fatty acids, hormones, bilirubin and drugs (Probable). Its main function is the regulation of the colloidal osmotic pressure of blood (Probable). Major zinc transporter in plasma, typically binds about 80% of all plasma zinc (PubMed:19021548). Major calcium and magnesium transporter in plasma, binds approximately 45% of circulating calcium and magnesium in plasma (By similarity). Potentially has more than two calcium-binding sites and might additionally bind calcium in a non-specific manner (By similarity). The shared binding site between zinc and calcium at residue Asp-273 suggests a crosstalk between zinc and calcium transport in the blood (By similarity). The rank order of affinity is zinc > calcium > magnesium (By similarity). Binds to the bacterial siderophore enterobactin and inhibits enterobactin-mediated iron uptake of E.coli from ferric transferrin, and may thereby limit the utilization of iron and growth of enteric bacteria such as E.coli (PubMed:6234017). Does not prevent iron uptake by the bacterial siderophore

aerobactin (PubMed:6234017).

Cellular Location

Secreted.

Tissue Location

Plasma.

Volume

50 μ l

ALB / Serum Albumin Antibody (clone 2H3D1;8F6F9) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Western blot using human Albumin mouse monoclonal antibody (lane 3, 4) and human IgG mouse...

Anti-Serum Albumin antibody IHC of human kidney.

Anti-Serum Albumin antibody IHC of human lung.

ALB / Serum Albumin Antibody (clone 2H3D1;8F6F9) - Background

Serum albumin, the main protein of plasma, has a good binding capacity for water, Ca(2+), Na(+), K(+), fatty acids, hormones, bilirubin and drugs. Its main function is the regulation of the colloidal osmotic pressure of blood. Major zinc transporter in plasma, typically binds about 80% of all plasma zinc.
