EPHA6 / EPH Receptor A6 Antibody (aa891-940) - Protein Information

Name EPHA6

Synonyms EHK2, HEK12

Function

Receptor tyrosine kinase which binds promiscuously GPI- anchored ephrin-A family ligands residing on adjacent cells, leading to contact-dependent bidirectional signaling into neighboring cells. The signaling pathway downstream of the receptor is referred to as forward signaling while the signaling pathway downstream of the ephrin ligand is referred to as reverse signaling (By similarity).

Cellular Location

Membrane; Single-pass type I membrane protein

Tissue Location

Expressed in brain and testis.

Volume

50 μ l
