HNRPA1 / HnRNP A1 Antibody (aa51-100) - Protein Information**Name** HNRNPA1**Synonyms** HNRPA1**Function**

Involved in the packaging of pre-mRNA into hnRNP particles, transport of poly(A) mRNA from the nucleus to the cytoplasm and modulation of splice site selection (PubMed: [17371836](http://www.uniprot.org/citations/17371836)). Plays a role in the splicing of pyruvate kinase PKM by binding repressively to sequences flanking PKM exon 9, inhibiting exon 9 inclusion and resulting in exon 10 inclusion and production of the PKM M2 isoform (PubMed: [20010808](http://www.uniprot.org/citations/20010808)). Binds to the IRES and thereby inhibits the translation of the apoptosis protease activating factor APAF1 (PubMed: [31498791](http://www.uniprot.org/citations/31498791)). May bind to specific miRNA hairpins (PubMed: [31498791](http://www.uniprot.org/citations/31498791)).

Cellular Location

Nucleus. Cytoplasm Note=Localized in cytoplasmic mRNP granules containing untranslated mRNAs. Shuttles continuously between the nucleus and the cytoplasm along with mRNA. Component of ribonucleosomes (PubMed:17289661) Nucleus. Note=(Microbial infection) SARS coronavirus-2/SARS-CoV-2 ORF6 protein increases accumulation to the nucleus.
