Anti-GPR52 Antibody (N-Terminus) - Protein Information

Name GPR52 {ECO:0000303|PubMed:9931487, ECO:0000312|HGNC:HGNC:4508}

Function

Gs-coupled receptor activated by antipsychotics reserpine leading to an increase in intracellular cAMP and its internalization (PubMed:[24587241](http://www.uniprot.org/citations/24587241)). May play a role in locomotor activity through modulation of dopamine, NMDA and ADORA2A-induced locomotor activity. These behavioral changes are accompanied by modulation of the dopamine receptor signaling pathway in striatum (PubMed:[24587241](http://www.uniprot.org/citations/24587241)). Modulates HTT level via cAMP-dependent but PKA independent mechanisms through activation of RAB39B that translocates HTT to the endoplasmic reticulum, thus avoiding proteasome degradation (PubMed:[25738228](http://www.uniprot.org/citations/25738228)).

Cellular Location

Cell membrane; Multi-pass membrane protein.

Tissue Location

Expressed in brain, especially in striatum.
