

Phospho-PLM(S68) Antibody
Purified Mouse Monoclonal Antibody (Mab)
Catalog # AM1120a

Specification

Phospho-PLM(S68) Antibody - Product Information

| | |
|-------------------|------------------------|
| Application | WB,E |
| Primary Accession | O9Z239 |
| Reactivity | Mouse |
| Host | Mouse |
| Clonality | Monoclonal |
| Isotype | Mouse IgG1 |

Phospho-PLM(S68) Antibody - Additional Information

Gene ID 56188

Other Names

Phospholemman, FXVD domain-containing ion transport regulator 1, Fxyd1, Plm

Target/Specificity

This PLM Antibody is generated from mice immunized with a KLH conjugated synthetic phosphopeptide corresponding to amino acid residues surrounding S68 of mouse PLM.

Dilution

WB~~1:100~500

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein G column, followed by dialysis against PBS.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Phospho-PLM(S68) Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Phospho-PLM(S68) Antibody - Protein Information

Name Fxyd1 {ECO:0000312|MGI:MGI:1889273}

Function Associates with and regulates the activity of the sodium/potassium-transporting ATPase (NKA) which transports Na(+) out of the cell and K(+) into the cell (PubMed:[15563542](#), PubMed:[18065526](#)). Inhibits NKA activity in its unphosphorylated state and stimulates activity when phosphorylated (By similarity). Reduces glutathionylation of the NKA beta-1 subunit ATP1B1, thus reversing glutathionylation-mediated inhibition of ATP1B1 (PubMed:[21454534](#)). Contributes

to female sexual development by maintaining the excitability of neurons which secrete gonadotropin-releasing hormone (PubMed:[19187398](#)).

Cellular Location

Cell membrane, sarcolemma {ECO:0000250|UniProtKB:P56513}; Single-pass type I membrane protein. Apical cell membrane {ECO:0000250|UniProtKB:O08589}; Single-pass type I membrane protein. Membrane, caveola {ECO:0000250|UniProtKB:O08589}. Cell membrane, sarcolemma, T-tubule {ECO:0000250|UniProtKB:O08589}. Note=Detected in the apical cell membrane in brain. In myocytes, localizes to sarcolemma, t-tubules and intercalated disks. {ECO:0000250|UniProtKB:O08589}

Phospho-PLM(S68) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)

Phospho-PLM(S68) Antibody - Images

Western blot analysis of anti-PLM Mab (Cat. #AM1120a) in 293 cells transfected with a plasmid encoding PLM.

Phospho-PLM(S68) Antibody - Background

This gene encodes a member of the FXYP family of small membrane proteins that share a 35-amino acid signature sequence domain, beginning with the sequence PFXYP and containing 7 invariant and 6 highly conserved amino acids. The protein encoded by this gene is a plasma membrane substrate for several kinases, including protein kinase A, protein kinase C, NIMA kinase, and myotonic dystrophy kinase. It is thought to form an ion channel or regulate ion channel activity and act as an accessory protein of Na,K-ATPase. Alternatively spliced transcript variants have been described.
