

ATG7 Antibody (Ascites)
Mouse Monoclonal Antibody (Mab)
Catalog # AM1813a

Specification

ATG7 Antibody (Ascites) - Product Information

| | |
|-------------------|------------------------|
| Application | WB,E |
| Primary Accession | O95352 |
| Reactivity | Human |
| Host | Mouse |
| Clonality | Monoclonal |
| Isotype | IgG2b, Igk |

ATG7 Antibody (Ascites) - Additional Information

Gene ID 10533

Other Names

Ubiquitin-like modifier-activating enzyme ATG7, ATG12-activating enzyme E1 ATG7, Autophagy-related protein 7, APG7-like, hAGP7, Ubiquitin-activating enzyme E1-like protein, ATG7, APG7L

Target/Specificity

Purified His-tagged APG7 protein was used to produced this monoclonal antibody.

Dilution

WB~~1:500~2000

Format

Mouse monoclonal antibody supplied in crude ascites with 0.09% (W/V) sodium azide.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

ATG7 Antibody (Ascites) is for research use only and not for use in diagnostic or therapeutic procedures.

ATG7 Antibody (Ascites) - Protein Information

Name ATG7 ([HGNC:16935](#))

Synonyms APG7L

Function E1-like activating enzyme involved in the 2 ubiquitin-like systems required for cytoplasm to vacuole transport (Cvt) and autophagy. Activates ATG12 for its conjugation with ATG5 as well as the ATG8 family proteins for their conjugation with phosphatidylethanolamine.

Both systems are needed for the ATG8 association to Cvt vesicles and autophagosomes membranes. Required for autophagic death induced by caspase-8 inhibition. Facilitates LC3-I lipidation with phosphatidylethanolamine to form LC3-II which is found on autophagosomal membranes (PubMed:[34161705](#)). Required for mitophagy which contributes to regulate mitochondrial quantity and quality by eliminating the mitochondria to a basal level to fulfill cellular energy requirements and preventing excess ROS production. Modulates p53/TP53 activity to regulate cell cycle and survival during metabolic stress. Also plays a key role in the maintenance of axonal homeostasis, the prevention of axonal degeneration, the maintenance of hematopoietic stem cells, the formation of Paneth cell granules, as well as in adipose differentiation. Plays a role in regulating the liver clock and glucose metabolism by mediating the autophagic degradation of CRY1 (clock repressor) in a time-dependent manner (By similarity).

Cellular Location

Cytoplasm. Preautophagosomal structure. Note=Localizes also to discrete punctae along the ciliary axoneme and to the base of the ciliary axoneme

Tissue Location

Widely expressed, especially in kidney, liver, lymph nodes and bone marrow.

ATG7 Antibody (Ascites) - Protocols

Provided below are standard protocols that you may find useful for product applications.

ATG7 Antibody (Ascites) - Images

Western blot analysis of anti-APG7 Monoclonal Antibody (Cat.#AM1813a) by Recombinant APG7 protein (Fragment 34KD). APG7 protein (Fragment 34KD)(arrow) was detected using the ascites Mab.

ATG7 Antibody (Ascites) - Background

This gene was identified based on homology to *Pichia pastoris* GSA7 and *Saccharomyces cerevisiae* APG7. In the yeast, the protein appears to be required for fusion of peroxisomal and vacuolar membranes. The protein shows homology to the ATP-binding and catalytic sites of the E1 ubiquitin activating enzymes.
