THAP11 Antibody (Center) (Ascites) - Protein Information**Name** THAP11

Function Transcriptional repressor that plays a central role for embryogenesis and the pluripotency of embryonic stem (ES) cells. Sequence-specific DNA-binding factor that represses gene expression in pluripotent ES cells by directly binding to key genetic loci and recruiting

epigenetic modifiers (By similarity).

Cellular Location

Nucleus. Cytoplasm. Note=May be regulated by shuttling of the protein between the cytoplasm and nucleus.

THAP11 Antibody (Center) (Ascites) - Background

The protein encoded by this gene contains a THAP domain, which is a conserved DNA-binding domain that has striking similarity to the site-specific DNA-binding domain (DBD) of *Drosophila* P element transposases.
