

LTB Antibody (C-term)(Ascites)
Mouse Monoclonal Antibody (Mab)
Catalog # AM2016a**Specification**

LTB Antibody (C-term)(Ascites) - Product Information

Application	WB,E
Primary Accession	Q06643
Other Accession	Q9TSV8 , NP_033666.1 , NP_002332.1
Reactivity	Human
Predicted	Pig
Host	Mouse
Clonality	Monoclonal
Isotype	IgM
Calculated MW	25390
Antigen Region	199-227

LTB Antibody (C-term)(Ascites) - Additional Information**Gene ID** 4050**Other Names**

Lymphotoxin-beta, LT-beta, Tumor necrosis factor C, TNF-C, Tumor necrosis factor ligand superfamily member 3, LTB, TNFC, TNFSF3

Target/Specificity

This LTB antibody is generated from mice immunized with a KLH conjugated synthetic peptide between 199-227 amino acids from the C-terminal region of human LTB.

Dilution

WB~~1:2000~16000

Format

Mouse monoclonal antibody supplied in crude ascites with 0.09% (W/V) sodium azide.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

LTB Antibody (C-term)(Ascites) is for research use only and not for use in diagnostic or therapeutic procedures.

LTB Antibody (C-term)(Ascites) - Protein Information**Name** LTB**Synonyms** TNFC, TNFSF3

Function Cytokine that binds to LTBR/TNFRSF3 (PubMed:[24248355](#)). May play a specific role in immune response regulation. Provides the membrane anchor for the attachment of the heterotrimeric complex to the cell surface. Isoform 2 is probably non-functional.

Cellular Location

Membrane; Single-pass type II membrane protein

Tissue Location

Spleen and thymus.

LTB Antibody (C-term)(Ascites) - Protocols

Provided below are standard protocols that you may find useful for product applications.

LTB Antibody (C-term)(Ascites) - Images

LTB Antibody (C-term) (Cat. #AM2016a) western blot analysis in HL-60 cell line lysates (35µg/lane). This demonstrates the LTB antibody detected the LTB protein (arrow).

LTB Antibody (C-term)(Ascites) - Background

Lymphotoxin beta is a type II membrane protein of the TNF family. It anchors lymphotoxin-alpha to the cell surface through heterotrimer formation. The predominant form on the lymphocyte surface is the lymphotoxin-alpha 1/beta 2 complex (e.g. 1 molecule alpha/2 molecules beta) and this complex is the primary ligand for the lymphotoxin-beta receptor. The minor complex is lymphotoxin-alpha 2/beta 1. LTB is an inducer of the inflammatory

response system and involved in normal development of lymphoid tissue. Lymphotoxin-beta isoform b is unable to complex with lymphotoxin-alpha suggesting a function for lymphotoxin-beta which is independent of lymphotoxin-alpha. Alternative splicing results in multiple transcript variants encoding different isoforms.
