

B2M Antibody
Mouse Monoclonal Antibody (Mab)
Catalog # AM2052b**Specification**

B2M Antibody - Product Information

Application	WB,E
Primary Accession	P61769
Other Accession	NP_004039.1
Reactivity	Human
Host	Mouse
Clonality	Monoclonal
Isotype	IgG1
Antigen Region	10-39

B2M Antibody - Additional Information**Gene ID** 567**Other Names**

Beta-2-microglobulin, Beta-2-microglobulin form pI 53, B2M

Target/Specificity

This B2M antibody is generated from mice immunized with a KLH conjugated synthetic peptide between 10-39 amino acids from human B2M.

Dilution

WB~~1:1000

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation followed by dialysis against PBS.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

B2M Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

B2M Antibody - Protein Information**Name** B2M ([HGNC:914](#))**Function** Component of the class I major histocompatibility complex (MHC). Involved in the presentation of peptide antigens to the immune system. Exogenously applied M.tuberculosis EsxA or EsxA-EsxB (or EsxA expressed in host) binds B2M and decreases its export to the cell surface (total protein levels do not change), probably leading to defects in class I antigen presentation

(PubMed:[25356553](#)).

Cellular Location

Secreted. Cell surface. Note=Detected in serum and urine (PubMed:1336137, PubMed:7554280).
{ECO:0000269|PubMed:7554280, ECO:0000269|Ref.6}

B2M Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

B2M Antibody - Images

B2M Antibody (N-term) (Cat.# AM2052b) western blot analysis in Jurkat,HeLa cell line lysates (35µg/lane).This demonstrates the B2M antibody detected the B2M protein (arrow).

B2M Antibody - Background

This gene encodes a serum protein found in association with the major histocompatibility complex (MHC) class I heavy chain on the surface of nearly all nucleated cells. The protein has a predominantly beta-pleated sheet structure that can form amyloid fibrils in some pathological conditions. A mutation in this gene has been shown to result in hypercatabolic hypoproteinemia.
