**SERPINC1 Antibody (Ascites) - Images**

SERPINC1 Antibody (Cat. #AM2053a) western blot analysis in rat liver tissue lysates (35µg/lane). This demonstrates the SERPINC1 antibody detected the SERPINC1 protein (arrow).

**SERPINC1 Antibody (Ascites) - Background**

The protein encoded by this gene is a plasma protease inhibitor and a member of the serpin superfamily. This protein inhibits thrombin as well as other activated serine proteases of the coagulation system, and it regulates the blood coagulation cascade. The protein includes two functional domains: the heparin binding-domain at the N-terminus of the mature protein, and the reactive site domain at the C-terminus. The inhibitory activity is enhanced by the presence of heparin. More than 120 mutations have been identified for this gene, many of which are known to cause

antithrombin-III deficiency.
