

GC Antibody(Center) (Ascites)
Mouse Monoclonal Antibody (Mab)
Catalog # AM2180a**Specification**

GC Antibody(Center) (Ascites) - Product Information

Application	WB,E
Primary Accession	P04062
Other Accession	O70KH2 , O2KHZ8 , NP_000148.2
Reactivity	Human
Predicted	Bovine, Pig
Host	Mouse
Clonality	Monoclonal
Isotype	IgM
Calculated MW	59716
Antigen Region	337-365

GC Antibody(Center) (Ascites) - Additional Information**Gene ID** 2629**Other Names**

Glucosylceramidase, Acid beta-glucosidase, Alglucerase, Beta-glucocerebrosidase, Beta-GC, D-glucosyl-N-acylsphingosine glucohydrolase, Imiglucerase, GBA, GC, GLUC

Target/Specificity

This GC antibody is generated from mice immunized with a KLH conjugated synthetic peptide between 337-365 amino acids from the Central region of human GC.

Dilution

WB~~1:100~1600

Format

Mouse monoclonal antibody supplied in crude ascites with 0.09% (W/V) sodium azide.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

GC Antibody(Center) (Ascites) is for research use only and not for use in diagnostic or therapeutic procedures.

GC Antibody(Center) (Ascites) - Protein Information**Name** GBA1 ([HGNC:4177](#))**Synonyms** GBA, GC, GLUC

Function Glucosylceramidase that catalyzes, within the lysosomal compartment, the hydrolysis of glucosylceramides/GlcCers (such as beta- D-glucosyl-(11')-N-acylsphing-4-enine) into free ceramides (such as N-acylsphing-4-enine) and glucose (PubMed:[15916907](#), PubMed:[24211208](#), PubMed:[32144204](#), PubMed:[9201993](#)). Plays a central role in the degradation of complex lipids and the turnover of cellular membranes (PubMed:[27378698](#)). Through the production of ceramides, participates in the PKC-activated salvage pathway of ceramide formation (PubMed:[19279011](#)). Catalyzes the glucosylation of cholesterol, through a transglucosylation reaction where glucose is transferred from GlcCer to cholesterol (PubMed:[24211208](#), PubMed:[26724485](#), PubMed:[32144204](#)). GlcCer containing mono-unsaturated fatty acids (such as beta-D- glucosyl-N-(9Z-octadecenoyl)-sphing-4-enine) are preferred as glucose donors for cholesterol glucosylation when compared with GlcCer containing same chain length of saturated fatty acids (such as beta-D- glucosyl-N-octadecanoyl-sphing-4-enine) (PubMed:[24211208](#)). Under specific conditions, may alternatively catalyze the reverse reaction, transferring glucose from cholesteryl 3-beta-D-glucoside to ceramide (Probable) (PubMed:[26724485](#)). Can also hydrolyze cholesteryl 3-beta-D- glucoside producing glucose and cholesterol (PubMed:[24211208](#), PubMed:[26724485](#)). Catalyzes the hydrolysis of galactosylceramides/GalCers (such as beta-D-galactosyl-(11')-N- acylsphing-4-enine), as well as the transfer of galactose between GalCers and cholesterol in vitro, but with lower activity than with GlcCers (PubMed:[32144204](#)). Contrary to GlcCer and GalCer, xylosylceramide/XylCer (such as beta-D-xyosyl-(11')-N-acylsphing-4- enine) is not a good substrate for hydrolysis, however it is a good xylose donor for transxylosylation activity to form cholesteryl 3-beta- D-xyloside (PubMed:[33361282](#)).

Cellular Location

Lysosome membrane; Peripheral membrane protein; Lumenal side. Note=Interaction with saposin-C promotes membrane association (PubMed:10781797). Targeting to lysosomes occurs through an alternative MPR-independent mechanism via SCARB2 (PubMed:18022370).

GC Antibody(Center) (Ascites) - Protocols

Provided below are standard protocols that you may find useful for product applications.

GC Antibody(Center) (Ascites) - Images

GC Antibody(Center) (Cat. #AM2180a) western blot analysis in MCF-7 cell line lysates (35µg/lane). This demonstrates the GC antibody detected the GC protein (arrow).

GC Antibody(Center) (Ascites) - Background

This gene encodes a lysosomal membrane protein that cleaves the beta-glucosidic linkage of glycosylceramide, an intermediate in glycolipid metabolism. Mutations in this gene cause Gaucher disease, a lysosomal storage disease characterized by an accumulation of glucocerebrosides. A related pseudogene is approximately 12 kb downstream of this gene on chromosome 1. Alternative splicing results in multiple transcript variants.
