

**AKT1S1 Antibody**  
**Purified Mouse Monoclonal Antibody (Mab)**  
**Catalog # AM8673b**

**Specification**

---

**AKT1S1 Antibody - Product Information**

Application	WB,E
Primary Accession	<a href="#">O96B36</a>
Reactivity	Human, Mouse
Predicted	Human, Mouse
Host	Mouse
Clonality	monoclonal
Isotype	IgG1, $\kappa$

**AKT1S1 Antibody - Additional Information**

**Gene ID** 84335

**Other Names**

Proline-rich AKT1 substrate 1, 40 kDa proline-rich AKT substrate, AKT1S1  
{ECO:0000312|EMBL:AAH16043.1}

**Target/Specificity**

This AKT1S1 antibody is generated from a mouse immunized with a recombinant protein from the human region of human AKT1S1.

**Dilution**

WB~~1:500-1:4000

**Format**

Purified monoclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein G column, followed by dialysis against PBS.

**Storage**

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

AKT1S1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**AKT1S1 Antibody - Protein Information**

**Name** AKT1S1 {ECO:0000312|EMBL:AAH16043.1}

**Function** Negative regulator of the mechanistic target of rapamycin complex 1 (mTORC1), an evolutionarily conserved central nutrient sensor that stimulates anabolic reactions and macromolecule biosynthesis to promote cellular biomass generation and growth (PubMed:[17277771](#), PubMed:[17386266](#), PubMed:[17510057](#), PubMed:[29236692](#)). In absence of

insulin and nutrients, AKT1S1 associates with the mTORC1 complex and directly inhibits mTORC1 activity by blocking the MTOR substrate- recruitment site (PubMed:[29236692](#)). In response to insulin and nutrients, AKT1S1 dissociates from mTORC1 (PubMed:[17386266](#), PubMed:[18372248](#)). Its activity is dependent on its phosphorylation state and binding to 14-3-3 (PubMed:[16174443](#), PubMed:[18372248](#)). May also play a role in nerve growth factor-mediated neuroprotection (By similarity).

#### Cellular Location

Cytoplasm, cytosol {ECO:0000250|UniProtKB:Q9D1F4}. Note=Found in the cytosolic fraction of the brain. {ECO:0000250|UniProtKB:Q9D1F4}

#### Tissue Location

Widely expressed with highest levels of expression in liver and heart. Expressed at higher levels in cancer cell lines (e.g. A-549 and HeLa) than in normal cell lines (e.g. HEK293)

### AKT1S1 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### AKT1S1 Antibody - Images

All lanes : Anti-AKT1S1 Antibody at 1:500-1:4000 dilution Lane 1: 293 whole cell lysate Lane 2: HeLa whole cell lysate Lane 3: MCF-7 whole cell lysate Lane 4: NIH/3T3 whole cell lysate Lysates/proteins at 20 µg per lane. Secondary Goat Anti-mouse IgG, (H+L), Peroxidase conjugated at 1/10000 dilution. Predicted band size : 27 kDa Blocking/Dilution buffer: 5% NFDN/TBST.

### AKT1S1 Antibody - Background

Subunit of mTORC1, which regulates cell growth and survival in response to nutrient and hormonal signals. mTORC1 is activated in response to growth factors or amino acids. Growth factor-stimulated mTORC1 activation involves a AKT1-mediated phosphorylation of TSC1-TSC2, which leads to the activation of the RHEB GTPase that potently activates the protein kinase activity of mTORC1. Amino acid-signaling to mTORC1 requires its relocalization to the lysosomes mediated by the Ragulator complex and the Rag GTPases. Activated mTORC1 up-regulates protein synthesis by phosphorylating key regulators of mRNA translation and ribosome synthesis. mTORC1 phosphorylates EIF4EBP1 and releases it from inhibiting the elongation initiation factor 4E (eIF4E). mTORC1 phosphorylates and activates S6K1 at 'Thr-389', which then promotes protein synthesis by phosphorylating PDCD4 and targeting it for degradation. Within mTORC1, AKT1S1 negatively regulates mTOR activity in a manner that is dependent on its phosphorylation state and binding to 14-3-3 proteins. Inhibits RHEB-GTP-dependent mTORC1 activation. Substrate for AKT1 phosphorylation, but can also be activated by AKT1-independent mechanisms. May also play a role in nerve growth factor-mediated neuroprotection.
