

EphA1 Antibody
Purified Mouse Monoclonal Antibody
Catalog # AO1043a**Specification**

EphA1 Antibody - Product Information

Application	WB, IHC
Primary Accession	P21709
Reactivity	Human
Host	Mouse
Clonality	Monoclonal
Isotype	IgG1
Calculated MW	108kDa KDa

Description

EPH receptor A1 (EphA1), with 976-amino acid protein(about 107 kDa), belongs to the ephrin receptor subfamily of the protein-tyrosine kinase family. The Eph subfamily represents the largest group of receptor protein tyrosine kinases identified to date and their ligands, the ephrins, can be subdivided into two major subclasses, ephrin-A and ephrin-B. Interaction of Eph receptor tyrosine kinases with their membrane bound ephrin ligands initiates bidirectional signaling events that regulate cell migratory and adhesive behavior, particularly in the nervous system. They have been implicated in various developmental processes, including axonal guidance, angiogenesis, morphogenesis and carcinogenesis.

Immunogen

Purified recombinant fragment of EphA1 expressed in E. Coli.

Formulation

Purified antibody in PBS containing 0.03% sodium azide.

EphA1 Antibody - Additional Information

Gene ID 2041

Other Names

Ephrin type-A receptor 1, hEpha1, 2.7.10.1, EPH tyrosine kinase, EPH tyrosine kinase 1, Erythropoietin-producing hepatoma receptor, Tyrosine-protein kinase receptor EPH, EPHA1, EPH, EPHT, EPHT1

Dilution

WB~~1/500 - 1/2000

IHC~~1/200 - 1/1000

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

EphA1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

EphA1 Antibody - Protein Information

Name EPHA1

Synonyms EPH, EPHT, EPHT1

Function

Receptor tyrosine kinase which binds promiscuously membrane- bound ephrin-A family ligands residing on adjacent cells, leading to contact-dependent bidirectional signaling into neighboring cells. The signaling pathway downstream of the receptor is referred to as forward signaling while the signaling pathway downstream of the ephrin ligand is referred to as reverse signaling. Binds with a low affinity EFNA3 and EFNA4 and with a high affinity to EFNA1 which most probably constitutes its cognate/functional ligand. Upon activation by EFNA1 induces cell attachment to the extracellular matrix inhibiting cell spreading and motility through regulation of ILK and downstream RHOA and RAC. Also plays a role in angiogenesis and regulates cell proliferation. May play a role in apoptosis.

Cellular Location

Cell membrane; Single-pass type I membrane protein

Tissue Location

Overexpressed in several carcinomas.

EphA1 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.
