

EIF2S1 Antibody (N-term)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP13469a**Specification**

EIF2S1 Antibody (N-term) - Product Information

Application	IF, WB, IHC-P,E
Primary Accession	P05198
Other Accession	P20459 , P68101 , Q6ZWX6 , P41374 , Q5ZLX2 , P68102 , NP_004085.1 , Q9I9E9 , P20460
Reactivity	Mouse
Predicted	Zebrafish, Bovine, Chicken, Drosophila, Pig, Rat, Yeast
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Antigen Region	60-89

EIF2S1 Antibody (N-term) - Additional Information**Gene ID** 1965**Other Names**

Eukaryotic translation initiation factor 2 subunit 1, Eukaryotic translation initiation factor 2 subunit alpha, eIF-2-alpha, eIF-2A, eIF-2alpha, EIF2S1, EIF2A

Target/Specificity

This EIF2S1 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 60-89 amino acids from the N-terminal region of human EIF2S1.

Dilution

IF~~1:10~50
WB~~1:1000
IHC-P~~1:10~50

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

EIF2S1 Antibody (N-term) is for research use only and not for use in diagnostic or therapeutic procedures.

EIF2S1 Antibody (N-term) - Protein Information

Name EIF2S1 ([HGNC:3265](#))

Synonyms EIF2A

Function Member of the eIF2 complex that functions in the early steps of protein synthesis by forming a ternary complex with GTP and initiator tRNA (PubMed:[16289705](#), PubMed:[38340717](#)). This complex binds to a 40S ribosomal subunit, followed by mRNA binding to form a 43S pre-initiation complex (43S PIC) (PubMed:[16289705](#)). Junction of the 60S ribosomal subunit to form the 80S initiation complex is preceded by hydrolysis of the GTP bound to eIF2 and release of an eIF2-GDP binary complex (PubMed:[16289705](#)). In order for eIF2 to recycle and catalyze another round of initiation, the GDP bound to eIF2 must exchange with GTP by way of a reaction catalyzed by eIF2B (PubMed:[16289705](#)). EIF2S1/eIF2-alpha is a key component of the integrated stress response (ISR), required for adaptation to various stress: phosphorylation by metabolic-stress sensing protein kinases (EIF2AK1/HRI, EIF2AK2/PKR, EIF2AK3/PERK and EIF2AK4/GCN2) in response to stress converts EIF2S1/eIF2-alpha in a global protein synthesis inhibitor, leading to an attenuation of cap-dependent translation, while concomitantly initiating the preferential translation of ISR-specific mRNAs, such as the transcriptional activators ATF4 and QRI1, and hence allowing ATF4- and QRI1-mediated reprogramming (PubMed:[19131336](#), PubMed:[33384352](#), PubMed:[38340717](#)). EIF2S1/eIF2-alpha also acts as an activator of mitophagy in response to mitochondrial damage: phosphorylation by EIF2AK1/HRI promotes relocalization to the mitochondrial surface, thereby triggering PRKN-independent mitophagy (PubMed:[38340717](#)).

Cellular Location

Cytoplasm, Stress granule {ECO:0000250|UniProtKB:Q6ZWX6}. Cytoplasm, cytosol {ECO:0000250|UniProtKB:P56286}. Mitochondrion. Note=Colocalizes with NANOS3 in the stress granules (By similarity). Relocalizes to the surface of mitochondria in response to mitochondrial damage and phosphorylation by EIF2AK1/HRI (PubMed:[38340717](#)). {ECO:0000250|UniProtKB:Q6ZWX6, ECO:0000269|PubMed:[38340717](#)}

EIF2S1 Antibody (N-term) - Images

Confocal immunofluorescent analysis of EIF2S1 Antibody (N-term) (Cat#AP13469a) with Hela cell followed by Alexa Fluor 488-conjugated goat anti-rabbit IgG (green). DAPI was used to stain the cell nuclear (blue).

EIF2S1 Antibody (N-term) (Cat. #AP13469a) western blot analysis in mouse bladder tissue lysates (35ug/lane). This demonstrates the EIF2S1 antibody detected the EIF2S1 protein (arrow).

EIF2S1 Antibody (N-term) (Cat. #AP13469a) immunohistochemistry analysis in formalin fixed and

paraffin embedded human stomach tissue followed by peroxidase conjugation of the secondary antibody and DAB staining. This data demonstrates the use of EIF2S1 Antibody (N-term) for immunohistochemistry. Clinical relevance has not been evaluated.

EIF2S1 Antibody (N-term) - Background

The translation initiation factor EIF2 catalyzes the first regulated step of protein synthesis initiation, promoting the binding of the initiator tRNA to 40S ribosomal subunits. Binding occurs as a ternary complex of methionyl-tRNA, EIF2, and GTP. EIF2 is composed of 3 nonidentical subunits, the 36-kD EIF2-alpha subunit (EIF2S1), the 38-kD EIF2-beta subunit (EIF2S2; MIM 603908), and the 52-kD EIF2-gamma subunit (EIF2S3; MIM 300161). The rate of formation of the ternary complex is modulated by the phosphorylation state of EIF2-alpha (Ernst et al., 1987 [PubMed 2948954]).
