

**RBBP8 Antibody (C-term)**  
**Affinity Purified Rabbit Polyclonal Antibody (Pab)**  
**Catalog # AP14029b**

**Specification**

---

**RBBP8 Antibody (C-term) - Product Information**

Application	WB,E
Primary Accession	<a href="#">O99708</a>
Other Accession	<a href="#">NP_976037.1</a> , <a href="#">NP_976036.1</a> , <a href="#">NP_002885.1</a>
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	101942
Antigen Region	763-792

**RBBP8 Antibody (C-term) - Additional Information**

**Gene ID** 5932

**Other Names**

DNA endonuclease RBBP8, 31--, CtBP-interacting protein, CtIP, Retinoblastoma-binding protein 8, RBBP-8, Retinoblastoma-interacting protein and myosin-like, RIM, Sporulation in the absence of SPO11 protein 2 homolog, SAE2, RBBP8, CTIP

**Target/Specificity**

This RBBP8 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 763-792 amino acids from the C-terminal region of human RBBP8.

**Dilution**

WB~~1:2000

**Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

**Storage**

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

RBBP8 Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic procedures.

**RBBP8 Antibody (C-term) - Protein Information**

**Name** RBBP8

## Synonyms CTIP

**Function** Endonuclease that cooperates with the MRE11-RAD50-NBN (MRN) complex in DNA-end resection, the first step of double-strand break (DSB) repair through the homologous recombination (HR) pathway (PubMed:[17965729](#), PubMed:[19202191](#), PubMed:[19759395](#), PubMed:[20064462](#), PubMed:[23273981](#), PubMed:[26721387](#), PubMed:[27814491](#), PubMed:[27889449](#), PubMed:[30787182](#)). HR is restricted to S and G2 phases of the cell cycle and preferentially repairs DSBs resulting from replication fork collapse (PubMed:[17965729](#), PubMed:[19202191](#), PubMed:[23273981](#), PubMed:[27814491](#), PubMed:[27889449](#), PubMed:[30787182](#)). Key determinant of DSB repair pathway choice, as it commits cells to HR by preventing classical non-homologous end-joining (NHEJ) (PubMed:[19202191](#)). Specifically promotes the endonuclease activity of the MRN complex to clear DNA ends containing protein adducts: recruited to DSBs by NBN following phosphorylation by CDK1, and promotes the endonuclease activity of MRE11 to clear protein-DNA adducts and generate clean double-strand break ends (PubMed:[27814491](#), PubMed:[27889449](#), PubMed:[30787182](#), PubMed:[33836577](#)). Functions downstream of the MRN complex and ATM, promotes ATR activation and its recruitment to DSBs in the S/G2 phase facilitating the generation of ssDNA (PubMed:[16581787](#), PubMed:[17965729](#), PubMed:[19759395](#), PubMed:[20064462](#)). Component of the BRCA1-RBBP8 complex that regulates CHEK1 activation and controls cell cycle G2/M checkpoints on DNA damage (PubMed:[15485915](#), PubMed:[16818604](#)). During immunoglobulin heavy chain class-switch recombination, promotes microhomology-mediated alternative end joining (A-NHEJ) and plays an essential role in chromosomal translocations (By similarity). Binds preferentially to DNA Y-junctions and to DNA substrates with blocked ends and promotes intermolecular DNA bridging (PubMed:[30601117](#)).

## Cellular Location

Nucleus. Chromosome Note=Associates with sites of DNA damage in S/G2 phase (PubMed:[10764811](#), PubMed:[25349192](#)). Recruited to DSBs by the MRE11- RAD50-NBN (MRN) complex following phosphorylation by CDK1, which promotes interaction with NBN (PubMed:[27814491](#), PubMed:[27889449](#), PubMed:[33836577](#)). Ubiquitinated RBBP8 binds to chromatin following DNA damage (PubMed:[16818604](#)).

## Tissue Location

Expressed in ER-positive breast cancer lines, but tends to be down-regulated ER-negative cells (at protein level)

## RBBP8 Antibody (C-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

## RBBP8 Antibody (C-term) - Images

All lanes : Anti-RBBP8 Antibody (C-term) at 1:2000 dilution Lane 1: HeLa whole cell lysate Lane 2: HCT116 whole cell lysate Lane 3: MCF-7 whole cell lysate Lane 4: T47D whole cell lysate Lysates/proteins at 20 µg per lane. Secondary Goat Anti-Rabbit IgG, (H+L), Peroxidase conjugated at 1/10000 dilution. Predicted band size : 102 kDa Blocking/Dilution buffer: 5% NFDM/TBST.

### RBBP8 Antibody (C-term) - Background

The protein encoded by this gene is a ubiquitously expressed nuclear protein. It is found among several proteins that bind directly to retinoblastoma protein, which regulates cell proliferation. This protein complexes with transcriptional co-repressor CTBP. It is also associated with BRCA1 and is thought to modulate the functions of BRCA1 in transcriptional regulation, DNA repair, and/or cell cycle checkpoint control. It is suggested that this gene may itself be a tumor suppressor acting in the same pathway as BRCA1. Three transcript variants encoding two different isoforms have been found for this gene. More transcript variants exist, but their full-length natures have not been determined.
