

CCND2 Antibody (N-term)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP14421a

Specification

CCND2 Antibody (N-term) - Product Information

Application	WB,E
Primary Accession	P30279
Other Accession	NP_001750.1
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	33067
Antigen Region	1-30

CCND2 Antibody (N-term) - Additional Information

Gene ID 894

Other Names

G1/S-specific cyclin-D2, CCND2

Target/Specificity

This CCND2 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 1-30 amino acids from the N-terminal region of human CCND2.

Dilution

WB~~1:1000

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

CCND2 Antibody (N-term) is for research use only and not for use in diagnostic or therapeutic procedures.

CCND2 Antibody (N-term) - Protein Information

Name CCND2 {ECO:0000303|PubMed:1386336, ECO:0000312|HGNC:HGNC:1583}

Function Regulatory component of the cyclin D2-CDK4 (DC) complex that phosphorylates and inhibits members of the retinoblastoma (RB) protein family including RB1 and regulates the

cell-cycle during G(1)/S transition (PubMed:[18827403](#), PubMed:[8114739](#)). Phosphorylation of RB1 allows dissociation of the transcription factor E2F from the RB/E2F complex and the subsequent transcription of E2F target genes which are responsible for the progression through the G(1) phase (PubMed:[18827403](#), PubMed:[8114739](#)). Hypophosphorylates RB1 in early G(1) phase (PubMed:[18827403](#), PubMed:[8114739](#)). Cyclin D-CDK4 complexes are major integrators of various mitogenic and antimitogenic signals (PubMed:[18827403](#), PubMed:[8114739](#)).

Cellular Location

Nucleus. Cytoplasm. Nucleus membrane. Note=Cyclin D-CDK4 complexes accumulate at the nuclear membrane and are then translocated into the nucleus through interaction with KIP/CIP family members

CCND2 Antibody (N-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

CCND2 Antibody (N-term) - Images

CCND2 Antibody (N-term) (Cat. #AP14421a) western blot analysis in CEM cell line lysates (35ug/lane). This demonstrates the CCND2 antibody detected the CCND2 protein (arrow).

Western blot analysis of CCND2 (arrow) using rabbit polyclonal CCND2 Antibody (N-term) (Cat. #AP14421a). 293 cell lysates (2 ug/lane) either nontransfected (Lane 1) or transiently transfected (Lane 2) with the CCND2 gene.

CCND2 Antibody (N-term) - Background

The protein encoded by this gene belongs to the highly conserved cyclin family, whose members are characterized by a dramatic periodicity in protein abundance through the cell cycle. Cyclins function as regulators of CDK kinases. Different cyclins exhibit distinct expression and degradation patterns which contribute to the temporal coordination of each mitotic event. This cyclin forms a complex with and functions as a regulatory subunit of CDK4 or CDK6, whose activity is required for cell cycle G1/S transition. This protein has been shown to interact with and be involved in the phosphorylation of tumor suppressor protein Rb. Knockout studies of the homologous gene in mouse suggest the essential roles of this gene in ovarian granulosa and germ cell proliferation. High level expression of this gene was observed in ovarian and testicular tumors.
