**GNMT Antibody (Center) - Additional Information**

**Gene ID** 27232

**Other Names**

Glycine N-methyltransferase, GNMT

**Target/Specificity**

This GNMT antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 78-106 amino acids from the Central region of human GNMT.

**Dilution**

WB~~1:1000

**Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

**Storage**

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

GNMT Antibody (Center) is for research use only and not for use in diagnostic or therapeutic procedures.

**GNMT Antibody (Center) - Protein Information**

**Name** GNMT ([HGNC:4415](#))

**Function** Catalyzes the methylation of glycine by using S- adenosylmethionine (AdoMet) to form

N-methylglycine (sarcosine) with the concomitant production of S-adenosylhomocysteine (AdoHcy), a reaction regulated by the binding of 5-methyltetrahydrofolate. Plays an important role in the regulation of methyl group metabolism by regulating the ratio between S-adenosyl-L-methionine and S-adenosyl-L-homocysteine.

#### Cellular Location

Cytoplasm {ECO:0000250|UniProtKB:P13255}.

#### Tissue Location

Expressed only in liver, pancreas, and prostate.

### GNMT Antibody (Center) - Background

The protein encoded by this gene is an enzyme that catalyzes the conversion of S-adenosyl-L-methionine (along with glycine) to S-adenosyl-L-homocysteine and sarcosine. The encoded protein is found in the cytoplasm and acts as a homotetramer. Defects in this gene are a cause of GNMT deficiency

(hypermethioninemia).
