

BMP9 (GDF2) Antibody (N-term)
Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP2064A**Specification**

BMP9 (GDF2) Antibody (N-term) - Product Information

Application	WB, IHC-P,E
Primary Accession	O9UK05
Reactivity	Human, Mouse
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Antigen Region	8-37

BMP9 (GDF2) Antibody (N-term) - Additional Information**Gene ID** 2658**Other Names**

Growth/differentiation factor 2, GDF-2, Bone morphogenetic protein 9, BMP-9, GDF2, BMP9

Target/Specificity

This BMP9 (GDF2) antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 8-37 amino acids from the N-terminal region of human BMP9 (GDF2).

DilutionWB~~1:1000
IHC-P~~1:50~100**Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation followed by dialysis against PBS.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

BMP9 (GDF2) Antibody (N-term) is for research use only and not for use in diagnostic or therapeutic procedures.

BMP9 (GDF2) Antibody (N-term) - Protein Information**Name** GDF2**Synonyms** BMP9**Function** Potent circulating inhibitor of angiogenesis. Signals through the type I activin receptor

ACVRL1 but not other Alks. Signaling through SMAD1 in endothelial cells requires TGF-beta coreceptor endoglin/ENG.

Cellular Location

Secreted

Tissue Location

Detected in blood plasma (at protein level).

BMP9 (GDF2) Antibody (N-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

BMP9 (GDF2) Antibody (N-term) - Images

The anti-hGDF2 N-term Pab (Cat. #AP2064a) is used in Western blot to detect hGDF2 in mouse liver tissue lysate.

Western blot analysis of GDF2 (arrow) using rabbit polyclonal GDF2-K23 (Cat. #AP2064a). 293 cell lysates (2 ug/lane) either nontransfected (Lane 1) or transiently transfected (Lane 2) with the GDF2 gene.

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated. BC = breast carcinoma; HC = hepatocarcinoma.

BMP9 (GDF2) Antibody (N-term) - Background

GDF2 is a member of the bone morphogenetic protein (BMP) family and the TGF-beta superfamily. This group of proteins is characterized by a polybasic proteolytic processing site which is cleaved to produce a mature protein containing seven conserved cysteine residues. The members of this family are regulators of cell growth and differentiation in both embryonic and adult tissues. Studies in rodents suggest that this protein plays a role in the adult liver and in differentiation of cholinergic central nervous system neurons.
